Important Facts About Crimping

TIME LINE FOR CRIMP TECHNOLOGY

1940s	All terminations were soldered (Hard-wired)
1953	AMP introduced Crimp Barrel Terminals.
1957	Cannon Brothers experimented with Machined Contacts with Crimp Barrels for Crimping
1960	Buchanan introduced the 4 Indent Crimp Tool with a Ratchet (Ref: MS3191)
1963	MS3191-1 was published as the first Crimp Tool Standard.
1965	MS3191-4 introduced by Daniels Manufacturing Corporation
1969	MIL-T-22520 published and dated to replace all previous specifications.
1974	Changed to MIL-C-22520, and many Slash Sheets added.
1996	Changed to MIL-DTL-22520.
Present	Changing to SAE AS22520.

CRIMPING: THEN AND NOW

The first multi-pin connectors were terminated by soldering the conductor to non-removable contacts. However, high temperature applications and the need for simple and reliable field service led to the introduction of connectors with removable contacts. These were crimped onto the conductor rather than being soldered.

The first standard crimp tool developed to crimp these new contacts was introduced in the early sixties. MS3191-1, a military drawing, defined this tool and its accessories. The MS3191-1 utilized a four indent crimp pattern together with a positive stop locator which controlled the travel of the indenters (crimp depth).

The MS3191-1 design was a compromise between simplicity of operation and crimp performance since the crimp depth for any given contact was not adjustable to accommodate the differing diameters of the conductors to which it would be crimped. It was, however, suitable for the crimp connectors of that era.

An improved tool design featuring independently adjustable crimp depths was soon introduced as MS3191-4. The MS3191-4 had an internal adjustment, totally independent of the locator, which permitted the selection of seven separate crimp depths, allowing optimal crimping of conductors ranging from AWG 12 to 26 regardless of the wire barrel size of

the contact.

MS3191-4 also introduced the use of the double tipped indenter to produce an eight indent crimp pattern which has consistently achieved superior tensile pull off values and mechanical properties.

MS3191-4 introduced the concept of a turret head containing three locators which could be used without separating any of them from the basic crimp tool.

In 1969 two military specifications for crimp tools were developed to replace the existing military drawings. They were MIL-T-22520C (Navy) and MIL-T-83724 (USAF) which defined a standard size crimp tool similar to the MS3191-4, but with an expanded eight step crimp depth range. These specifications also defined a miniature crimp tool to crimp conductors as small as AWG 32.

Both documents were combined in 1971 into MIL-C-22520D. All previous military standards for crimp tools were then cancelled including the MS3191. This list includes specifications for indent crimp tools, terminal lug crimp tools, pneumatic tools, coaxial cable crimp tools and other specialized crimp tools.

MIL-DTL-22520 established a single specification which set forth performance requirements for all crimp tools to be used on military standard electrical connectors. This eliminated the waste and confusion which accompanied the overlapping applications of many different "standard" crimp tools called out by a deluge of unrelated military drawings.

THE CRIMPING CONCEPT

Crimping is a method of firmly attaching a terminal or contact end to an electrical conductor by pressure forming or reshaping a metal barrel together with the conductor. The forming of a satisfactory crimp depends on the correct combination of conductor, crimp barrel and tool.

When applied with a properly matched tool, a union is established which has both good electrical and mechanical characteristics. The tool will provide these requirements consistently and reliably with repeatability assured by quality cycle controlled tooling. There are several common configurations of crimped joint; several examples are shown below.

The electrical resistance of a properly designed and controlled crimped joint should be equal to, or less than, the

resistance of an equal section of wire. Specifications state the requirements in terms of millivolt drop at a designated current.

The mechanical strength of a crimped joint and hence its pull-out force (tensile strength), varies with the deformation applied (i.e. the crimp die of the tool determines the crimp configuration and deformation). Therefore, by properly shaping the deformation, a high pull-out force can be achieved.

The dies in the tool determine the completed crimp configuration which is generally an element of contact and/or connector design. Some of the design considerations are: a) The type of contact, its size, shape, material and function, b) The type and size of wires to be accommodated, c) The type of tooling into which the configuration must be built.

Manual and Pneumatic Wire Strippers

The WSP-1630 series Pneumatic Wire Stripper is the ultimate combination of performance, reliability, and portability. It was developed in cooperation with major aerospace contractors addressing their needs for a reliable, simple to operate, pneumatic wire stripper utilizing the blades and accessories which are certified and inventoried within their existing facilities.

Features Include:

- Compact Design allows hand-held tool to be used in confined areas.
- Light Weight construction and pneumatic actuation system minimize operator fatigue and carpal tunnel injuries.
- Fast, smooth stripping operation

results in maximum quality wire preparation at a production rate unattainable with hand operated mechanical strippers.

- Compatibility with common, commercially available stripper blades, grippers, and other components makes the unit economical, and it assures a wide range of applications with all types of wire.
- Rotatable Head permits left or right hand operation.
- Wire Stop may be used for precise, repeatable operations.
- Adjustable Speed Control allows the operator to regulate the speed of the stripping operation by simply rotating the adjustment collar which is a part of the air hose. This

enables greater accuracy and control of the wire stripper.

The WSP-1630 part number applies to the basic pneumatic wire stripper frame with L-5211 blades (less accessories), which accommodates most size 16 AWG and smaller wires. Blades, pads and accessories to cover a variety of wire types and sizes are available (see page 3). Consult DMC for designated part numbers for wire strippers with blades, pads and alternate components. Please contact DMC for specific details about these wire stripping products. Other types of wire strippers available.

NOTE: Consult DMC for blade/wire size range for pneumatic strippers.

WIRE STRIPPING TECHNIQUE

- Determine the proper length of insulation to be removed. Wire must be visible in inspection hole. Insulation must be 1/64" – 1/32" from end of contact or inside of insulation cup.
- Insert wire into exact center of correct slot for wire size to be stripped. Each slot is marked with wire size.
- Close handles together as close as possible.
- To prevent birdcaging the wire, partially open handles to allow grips to open, then remove wire before allowing handles to fully open.
- Release handles, allowing wire holder to return to open position.
- Remove stripped wire.
- After stripping, strands of wire should be twisted firmly together in the same direction as the normal lay of the wire.
- Stripped wire with nicked or cut strands is not acceptable.

Standard Adjustable Crimp Tool

UPPER RANGE CRIMP TOOL AF8 M22520/1-01

The DMC AF8, qualified to MIL-DTL-22520/1*, has virtually limitless application within the specified **wire range of 12 through 26 AWG**. Over one thousand turret heads are available to adapt the tool frame to your specific military or proprietary contact/wire combination. The 8 impression crimp, which is standard in the AF8, assures absolute maximum tensile strength with almost every closed barrel contact. Special indent configurations and gaging are available upon request.

For proper operation, the tool must be mated with one of the following optional accessories: a military standard or non-military turret head (TH-XXX Part No. Series), a military standard or non-military positioner (TP-XXX Part No. Series), or an adjustable positioner** (Part No. UH2-5). This is done simply by orienting the head in the keyed position, and by tightening the hex socket screws provided as part of the head.

The precision ratchet controls cycling of the tool in both directions of handle movement. This assures the same accurate crimp every time. It's like having a quality control inspector at every work station.

Positive crimp depth is controlled by an 8 position selector knob conveniently located on the tool frame. The operator simply dials the desired step for the wire being used. This setting can be secured by use of a locking pin or safety wire.

The carefully engineered design achieves the absolute maximum mechanical advantage and the tool's light weight helps minimize operator fatigue.

A permanent dataplate is affixed to all turret heads and positioners. This plate lists specific contact part numbers, the corresponding position color code (for 3 position turret heads), and suggested selector depth settings for the wire size being used.

The adjustable head (P/N UH2-5) is ideally suited for lab work and prototype production applications. This head is attached in the same manner as explained above. The selected contact is inserted through the entry hole on the opposite side of the tool frame from the head. The height adjusting screw is then rotated until the contact is in the proper position for crimping. The screw can be secured with the locknut provided. Some testing will be necessary to determine the optimum selector setting for your contact/wire combination.

The AF8 is approximately 9 $\frac{3}{4}$ " x 2 $\frac{1}{2}$ " x 1 $\frac{1}{4}$ " and weighs 15 oz.

* Change to SAE AS22520 in process consult DMC for status.

**Adjustable positioner is not recommended for production operations

Other than keeping the unit clean and properly stored when not in service, no operator maintenance is required. DMC offers complete factory service by knowledgeable technicians within a reasonable turnaround time. Complete instructions concerning the use, care and warranty are supplied with each tool. Additional copies are available on request.

The battery powered versions of this tool are found on page 8.

Pneumatic versions of this tool are found on pages 9-12.

The DMC1186 tool kit contains the AF8 tool frame, tool gage, and all mil-spec positioners and turret heads. Also included in the DMC1186 are tool instruction sheets and a tool selection chart.

Periodic gaging is recommended to insure accurate calibration. This can be done easily by setting the tool selector knob to position #4, and checking indenter closure with the M22520/3-1 "GO/NO-GO" gage (DMC part no. G125).

Miniature Adjustable Crimp Tools

LOWER RANGE CRIMP TOOL AFM8 M22520/2-01

Qualified to MIL-DTL-22520/2*, the DMC AFM8 is designed for most of the miniature and sub-miniature connector types that are so widely used in electronic systems. The AFM8 meets the need for a miniature tool accommodating **wire sizes 20 through 32 AWG**.

The AFM8 gives a Mil-Standard 8 impression crimp, which assures maximum tensile strength. The cycle controlled precision ratchet assures consistently accurate crimps every time. The tool frame has a built-in 8 step selector knob for ease in dialing the correct crimp depth setting for the wire being used.

Positioners adapt the tool frame to a particular application. The data plate on each positioner designates which contacts the positioner accommodates for its wire size and indicates selector position. The positioner is easily removed and changed.

Periodic gaging is recommended to insure accurate calibration. This is easily accomplished with the M22520/3-1 "GO/NO-GO" gage (DMC part no. G125) on SEL setting #8. The AFM8 is 6 3/4" in length and weighs approximately 10 oz.

Other than keeping the tool clean and properly stored when not in use, no operator maintenance is required. *Pneumatic versions of this tool are found on page 9-12.*

DMC274 Tool Kit

The DMC274 tool kit contains the AFM8 tool frame, tool gage, and all mil-spec positioners. Also included in the DMC274 are tool instruction sheets and a tool selection chart.

* Change to SAE AS22520 in process consult DMC for status.

MIDDLE RANGE INDENT CRIMP TOOL **MH860 M22520/7-01**

Qualified to MIL-DTL-22520/7*, the DMC MH860 is a recent addition to the military specification. It was developed to meet the demonstrated need for supporting the majority of electrical systems with one versatile crimp tool frame.

The MH860 accepts the entire middle wire range of 16 through 28 AWG, with positioners which adapt it to virtually all applications consistent with others in the MIL-DTL-22520 family.

Pneumatic versions of this tool are found on pages 9-12.

The DMC123 tool kit contains the MH860 tool frame, tool gage, and all mil-spec positioners. Also included in the DMC123 are tool instruction sheets and a tool selection chart.

**DMC123
Tool Kit**

*Change to SAE AS22520 in process consult DMC for status.

THE MIL-DTL-28840 TOOLING

MIL-DTL-28840 connectors were developed for the Navy, for use with jacketed cable for shipboard applications. They are a high density circular connector series utilizing a high shock threaded coupling system with front release crimped contacts.

For these connectors, DMC has added a new crimping tool to its range, the M22520/34-01 DMC P/N 39-000.

*Adjustable positioner is not recommended for production operations

Battery Powered Hydraulic Indent Crimp Tools

GET THE PORTABILITY OF A HAND TOOL WITH THE STAMINA OF A POWER TOOL!

DMC is pleased to present our battery powered hydraulic tools to crimp MIL-C-M39029, MIL-C-M39012, and a full range of proprietary contacts onto copper and aluminum cable **12 through 26 AWG**. These tools are equivalent to DMC's AF8 (M22520/1-01) and AFM8 (M22520/2-01) hand tools and use the same turret heads, positioners, and other accessories.

AFE8B

The AFE8B Battery Powered Hydraulic Indent Crimp Tool is a hand held, self-contained indent crimp tool. The crimp head, battery, and pump unit are contained in one ergonomic tool body and weighs about 4 pounds. It is equivalent to DMC's AF8 hand tool and uses the same turret heads, positioners, and other accessories.

TOOL INCLUDES:

Carrying Case,
Two 18v Batteries
(p/n HDE-LI-B),
One Battery Charger (110V)
(p/n HDE-LI-120C).

FEATURES

- Ergonomic design allows one-handed operation
- Indenters automatically open when crimp is complete
- Head rotates for best hand position
- LED indicator to display unit's status

CRIMP CAPACITIES

- Max. Crimp Force: .75 Tons
- Avg. Crimp Time: 2 seconds
- Avg. Crimps per Charge: Approx.150 (depending on size and type of contact wire)

AFE8B SPECIFICATIONS

- Length: 14.75" (375 mm)
- Width: 2.87" (72.9 mm)
- Depth: 4.5" (114.3 mm)
- Weight (w/ battery): 3.92lb (1.78kg)
- Sound Level: 75db at 1 meter
- Vibration: <2.5m/s²
- Hydraulic Oil: Shell Tellus® T-15

BATTERY

(P/N: HDE-LI-B)

- Charging Voltage: 18 VDC
- Charging Time: 15 minutes
- 2 batteries included with each new tool
- Protective case included with each tool

AFE8B-230 available with 230V charger

AFE8B

AFME8B

Also available in a version which is interchangeable with miniature crimp tool positioners on page 6.

Pneumatic Indent Crimp Tools

The DMC Pneumatic (Compressed Air Powered) Crimp tools WA27F, WA22P and WA22 are direct equivalents of their corresponding hand tools. They use the same turret heads or positioners, gages and other accessories.

As production requirements grow, all that needs to be added is the tool frame itself. The resulting production capability can in many instances compare with an automated system costing thousands of dollars more.

These pneumatic tools are widely used in both military and proprietary programs. Their popularity has come about because of their unequalled reputation for trouble-free, dependable service, and their cost saving adaptability.

Whether upper, middle, lower, or mid-current range, the pneumatic tools fulfill the same precise crimp requirements as the hand models. They use the same indenter configuration, the same gaging dimensions and selector settings. No additional operator training is necessary. Accurate calibration is maintained by a unique 8 step machined steel block that holds gaging tolerances far longer than the usual adjustment screw method. This solid gaging means high output with less downtime.

The compact size and light weight of these tools allows them to be used easily as hand tools, as well as high production bench tools. The hand trigger is designed for equal ease of use by right or left handed operators. Bench mounted, the optional foot valve allows hands-free operation. The bench mount will allow the tool to be secured at virtually any angle for individual comfort, thereby minimizing operator fatigue.

The WA27F accommodates TH-xxx series turret heads or TP-xxx series positioners, length 10", diameter 2 3/4", weight 50 oz.

The WA22 accommodates standard and commercial "K" series positioners, length 8", diameter 2 1/4", weight, 32 oz.

The WA22P accommodates MIL-standard and commercial "86" series positioners, length 8", diameter 2 1/4", weight, 32 oz.

Side Select Pneumatic Crimp Tools

DMC Pneumatic tools are often mounted on the Bench Mount, and some find it inconvenient to set or check the setting of the crimp depth selector when the tool is mounted for benchtop use. DMC resolved that issue by creating a version of the tool which moves the crimp depth selector to the side of the tool in a "looking up" position. These tools have the same crimp depth settings as the original tools, but with the knob in a more convenient position: Adding "SS" to the part number of the WA Series Pneumatic Crimp Tools will apply to the Side-Select versions. A retro fit kit is also available for converting standard tools to Side Select tools. Consult DMC for additional information.

Hand-Held Pneumatic Indent Crimp Tool

WA22LC-X1 HAND-HELD PNEUMATIC CRIMP TOOL

**WA27RF
Regulator and Filter**

WA22LC-X1 HAND-HELD PNEUMATIC CRIMP TOOL

The same basic WA22 tool that is commonly bench mounted for first end terminations is now available in a lighter, more ergonomic version for hand-held operation. The WA22LC-X1 tool features a smaller profile and lighter weight which makes it especially useful for second end terminations on vertical and horizontal wiring form boards. Most size 20 and smaller contacts can be terminated with this tool.

WA27RF REGULATOR AND FILTER

Clean, consistent air pressure is required for precise tools in order to maintain their reliability and repeatability. It may require a regulator and filter inline with the incoming compressed air supply. Multiple crimp tools can be attached to one regulator/air filter equipped line.

WA10A FOOT VALVE

The foot valve, when installed in-line with an air supply, makes a portable system which is adaptable to any work bench. Air supply requirements are 80-120 PSI (5.5 to 8.2 bar) clean dry air. The system uses standard air fittings readily available in most shops.

BM-2A BENCH MOUNT

The fully adjustable bench mount is compatible with most DMC power tools. The base measures 4" x 8" and can be used attached or unattached to the work surface.

BM-2A BENCH MOUNT

Pneumatic Auto-Lift Indent Crimp Termination System

SAVE TIME AND AVOID ERRORS

DMC's standard WA-series pneumatic crimp tools are now available with an automatic actuator that eliminates the step of pressing a trigger or stepping on a foot pedal to actuate the tool.

Additionally, when the contact is loaded into the tool, the wire barrel remains in clear view. This allows the operator to see that the wire is inserted into the contact (wire barrel) correctly, with all strands inside the contact.

Once the wire is properly inserted into the contact, a little additional pressure on the wire pushes the contact into the automatic positioner. When the contact reaches the correct crimp position, the tool automatically crimps the contact onto the wire.

This line of tools available for the semi-automatic crimping of contact/wire assemblies for wire sizes 12 -32 AWG. However, Smaller wire sizes (24-32) are not very rigid and some difficulty may be experienced when pushing down on the contact/wire assembly. AP systems are not recommended for wire sizes smaller than 26 AWG.

APMOD

RETRO-FIT EXISTING TOOLS

If you already have one or more DMC indent crimp pneumatic tools in your shop, DMC offers a retro-fit kit (P/N - APMOD) to upgrade the standard pneumatic tools to an Auto-Lift pneumatic tool. Conversion also requires the appropriate QA series positioner modules. Consult DMC for details.

STEP 1

Place an uncrimped contact into the positioner insert.

When the contact is loaded into the tool, the wire barrel remains above the tool in clear view.

STEP 2

The operator can then insert the wire into the contact and see that the wire is inserted correctly, with all strands inside the contact.

STEP 3

Push down lightly with the wire in one continuous motion. When the contact reaches the correct crimp position, the automatic positioner will crimp the contact to the wire.

NO foot pedal or manual activation required!

COMPLETE

Remove the finished assembly and insert the next contact to be crimped.

Pneumatic Auto-Lift Indent Crimp Termination System

MODULE SYSTEM

A special module is mounted to an extended bench mount and either a WA22, WA22P, WA27F or WAXSS version pneumatic crimp tool. Separate positioner modules are attached or removed without use of tools.

Tools ordered with a positioner module will come fully assembled and ready for your crimping need. Just plug your shop air supply into the fitting provided on the base plate module. Adjust the selector knob as specified on the dataplate of the QA module for the size wire you are crimping.

The system operates from standard shop air 80-120 psi (5.5-8.27 BAR).

Reference Military Part Number	Standard Pneumatic Tool	Tool for AP Module System
M22520/1-01	WA27F	WA27FQA
M22520/2-01	WA22	WA22QA
M22520/7-01	WA22P	WA22PQA

Other models are available - Contact DMC

QUICK ASSEMBLY (QA) POSITIONER MODULES

These modules are constructed with bayonet type mounting protrusions enabling a quick, tool-free interchange of positioner modules for different crimping requirements. All modules are clearly marked for contact type and wire size selector setting.

Modules are available for most contacts for existing "K" and "86" Positioners and "TH" and "TP" series heads sizes 12 thru 26. These modules may be ordered separately. Modules are not available for the "Straightener" positioner series.

QA Series Positioner Module Part Number Guide

K## = KQA##

So the Quick Assembly Positioner Module version of positioner K42 is KQA42.

TH## = THQAP##-#

(The "-#" identifies the position color code with "-2" for Blue, "-4" for Red, "-5" for Yellow, and "-6" for Green.) So the Quick Assembly Positioner Module version of turret head TH163 in the Blue position is THQAP163-2.

TP## = TPQA##

So the Quick Assembly Positioner Module version of single position head. TP1032 is TPQA1032.

Large Gage Pneumatic Indent Crimp Tools

WA23 (M22520/23-01) PNEUMATIC INDENT CRIMP TOOL

DMC's heavy pneumatic indent crimp tool functions with the push of a button for operator ease. This heavy duty crimp tool accommodates large size contacts 8 through 0000 (AWG) and operates on standard 90–125 psi (5.4–8.16 BAR) shop air sources.

It is engineered with the operator's safety in mind and features a full cycle control system. This tool is portable and needs no extra booster for large size contacts.

The standard die assembly and positioner are easily interchangeable with no special tool required. Custom dies and positioners may be designed to specific requirements. An optional foot pedal is available upon request.

A portable hydraulic version of this tool is available. Reference part number HD23. Consult DMC for details.

Technical Application Guide For Contacts and Connectors

TYPICAL COMPLEX CABLE CONNECTOR

- A. Wire Seal
- B. Socket Contact
- C. Chamfered Socket Lead-In
- D. Peripheral O-Ring Seal
- E. Pin Contact
- F. Contact Retention Clip
- G. Interfacial Seal

CONTACT COLOR CODE AND BIN*

0 – Black (BLK)	5 – Green (GRE)
1 – Brown (BRN)	6 – Blue (BLU)
2 – Red (RED)	7 – Violet (VIO)
3 – Orange (ORN)	8 – Gray (GRA)
4 – Yellow (YEL)	9 – White (WHI)

*BASIC IDENTIFICATION NUMBER

- Example shown: 360 (Orange, Blue, Black)
- Manufacturers have the option of identifying contacts by stamping the BIN code on the shoulder or the wire barrel (size 16 and larger).

DISCLAIMER OF LIABILITY

THE INFORMATION CONTAINED IN THIS TOOLING GUIDE FOR AEROSPACE WIRING SYSTEMS HAS BEEN COMPILED BY DMC FROM VARIOUS SOURCES, INCLUDING ITS OWN DOCUMENTATION. IT IS PRESENTED AS AN AID TO ASSIST DMC'S OWN CUSTOMERS AND POTENTIAL CUSTOMERS IN SELECTING APPROPRIATE TOOLING FOR THE ASSEMBLY AND MAINTENANCE OF ELECTRICAL WIRING SYSTEMS.

WHILE DMC BELIEVES THIS INFORMATION TO BE ACCURATE, DUE TO THE COMPLEXITY AND VOLUME OF THE INFORMATION PRESENTED, DMC MUST AND DOES DISCLAIM ANY WARRANTY FOR ITS ACCURACY.

IN NO EVENT SHALL DMC BE LIABLE FOR CONSEQUENTIAL, INCIDENTAL, SPECIAL OR OTHER TYPES OF DAMAGES, LOSS OF ANTICIPATED PROFITS OR FOR ANY OTHER DAMAGES RESULTING FROM THE USE OF THE INFORMATION PRESENTED HEREIN.

Contact M39029/119 and 120 High are Quadrax contacts, see page 33.

Contact M39029/121 and 122 are alternate power contacts.

MIL-STD-1760

(MIL-DTL-38999 - SERIES III VARIATION)

MIL-STD 1760 provides a common, cross platform, mechanical, electrical, and digital interface between weapons/external equipment stores and aircraft. The standard MIL-STD-1760 connector is used to transfer guidance information to weapons.

The standard connector for MIL-STD-1760 is D38999 Series III (Reference MIL-DTL-83538) Insert Arrangement #25-20. Lanyard Release Plug (/31), and Jam Nut or Flange Mount Receptacles (Also Rail Launch Configuration is available).

For Backshell Torquing Tools, see pages 73 & 74.

**M81714/69 is a module removal tool (used to remove terminal junction blocks from the rack/carrier).

DMC does not provide connectors, contacts or wiring components. Parts shown here are for reference only. See disclaimer of liability on page 18.

Installing and Removal Tools

DMC is dedicated to serving the connector tooling needs of the electronics industry. We, therefore, continue our connector product package with a wide variety of installing and removal tools.

Although we supply both plastic and metal tools, we recommend the use of the metal tools because of their durability.

When used properly they are more cost effective in that they withstand thousands of contact insertion and removal cycles. The trend to all metal tools is being actively encouraged by most departments of the government.

DMC installing and removal tools are of proven high quality and reliability. In addition to the tools listed in the reference table, we have many more for other connector applications.

Consult factory for details.

Illustrated on page 55 are typical rear and front release retention methods found in today's connectors.

DMC1155 GENERAL PURPOSE INSERTION AND REMOVAL TOOL KIT

DMC's General Purpose Insertion and Removal Tool Kit contains metal insertion and removal tools for common Mil-Spec Circular Connectors, D-Subminiature Connector, ARINC Connectors and AS81714 terminal junctions. Consult DMC for further details.

DMC does not provide connectors, contacts or wiring components. Parts shown here are for reference only. See disclaimer of liability on page 18.

INSTALLING TOOLS

Straight (ILL. 1) and joggled tools (ILL. 2) hold contact and wire in line with center or side of the tool handle. Tool sizes are "0" to "24" gage. Handles are color coded aluminum. Tools range from 4 1/2" to 6" long with replaceable tips.

FRONT REMOVAL, REAR INSTALLING TOOLS

Both front removal (ILL. 3) and rear installing (ILL. 4) Military Standard tools offer a convenient and practical approach to servicing the MIL-C-81511, Series 1 & 2 connectors. Tools are color coded for contact size with half-inch hex metal handles.

REAR REMOVAL AND INSTALLING TWEezERS

Tools are for sizes 8 to 24 contacts. Used in NAS 1599, MIL-DTL-38999 and other rear release connectors.

REAR RELEASE PLIERS

This tool unlocks MIL-C-005015 contacts and sizes are 0, 4 and 8 gage.

FRONT RELEASE

Front release connectors are easily serviced with these military spec removal tools. Handles are color coded for contact size. Replaceable tips are available.

REF: MIL-C-005015, MIL-DTL-26482, MIL-C-26500, and MIL-C-26636 Connectors.

UNWIRED CONTACT TOOLS

Tool removes unwired contacts from connectors and is available in two styles. The metal style employs a locking wedge and removes contacts from terminal block as well as from the connectors.

The Military Standard tools use plastic probes which are interchangeable and available in sizes 12, 16, 20 (MS3448-001 kit) and 12 through 22 (MS3159), series NAS 1599 and MIL-C-81511, Series 3 and 4.

LONG-SLOT TOOLS

This long-slot tool illustrates the standard for MIL-C-005015 installing tools. Modified versions are available on request.

ILL. 12

FRONT REMOVAL SPRING- LOADED PROBE CONTACT TOOLS (ILL. 7)

Employing the floating tip concept, these tools offer quality, as well as ease in operation. Body and handle are anodized aluminum alloy and color coded. Replaceable tips are available and require no special installing tools.

DMC does not provide connectors, contacts or wiring components. Parts shown here are for reference only. See disclaimer of liability on page 18.

* ANGLED METAL TWEEZER TOOLS LISTED. IN-LINE AND JOGGLED TIP TOOLS AVAILABLE. CONSULT DMC FOR DETAILS.

PLASTIC TOOLS VS. DMC METAL TOOLS

Plastic Insertion and Removal Tools are common throughout the aerospace wire harness industry, and they are required to be packaged and supplied with many of the rear release MIL-SPEC connectors which are supplied with contacts.

Metal tools are readily available for all applications where all plastic and plastic/metal tools are specified. DMC stands by the commitment to our customers that we manufacture and supply the most durable and functional assembly/disassembly tooling available. This is another area of our product line where that commitment pays off, and allows the users many options for their best tooling choice.

All metal insertion and removal tools are durable, and if used properly, the all metal tools are less likely to cause damage to connector sealing grommets, or slow the assembly process of connectors and similar wiring components in production wire shops.

DISADVANTAGES OF PLASTIC TOOLS

The complete insertion/locking of the contact into the connector requires a firm push, in-line with the multiple contact retention tines (gripping latches which hold the contact into the connector). The strength and stability of plastic tools is a compromise to the requirement of having all contact retention tines locked around the contact shoulder. The DMC all metal insertion tools have the strength and stability to fully insert and lock the contact into its cavity.

The primary root causes of contact retention failures is partially inserted contacts, due to the use of flexible plastic tools, or inserting contacts into a connector with no insertion tool (push with the wire only).

Please refer to the tables on page 56 for the recommended all metal insertion and removal tools for common MIL-SPEC connectors and contacts. There are options for all metal tools not shown in the chart. DMC stocks and provides all plastic, plastic/metal, and all metal insertion and removal tools of many types. Please feel free to contact DMC to learn about all the insertion/removal tool options for your particular wiring applications.

Typical All Plastic Tool Operation

Typical All Metal Tool Operation

Unwired Contact Removal Tools (M81969/30)

PLASTIC-PROBE UNWIRED CONTACT REMOVAL TOOLS

Removing unwired contacts can be difficult. It is very important not to damage the interfacial seal and/or connector insert when removing an unwired contacts.

M81969/30 Series Plastic Probe Tools are ideal for removing unwired contacts from connectors. As the plastic probe slides into the connector, it disengages the contact locking mechanism and stretches over the contact, gripping it securely in the plastic probe.

Different colored tool probes and probe bands are used to distinguish between series and contact sizes.

PLASTIC-PROBE UNWIRED CONTACT REMOVAL TOOLS

METAL-PROBE UNWIRED CONTACT AND BROKEN WIRE REMOVAL TOOLS

When a wire breaks inside the connector the remaining wire strands can damage the plastic tips of DMC's standard unwired contact removal tools. To solve this problem, DMC engineered the DRK276 series of metal tip removal tools for removing broken wire contacts.

Instead of different colored probes and bands, the DRK276 series removal tools have different colored tool bodies to help distinguish between tip sizes.

METAL-PROBE UNWIRED CONTACT REMOVAL TOOLS

CONNECTOR SERIES	TOOL PART NUMBER	PROBE SIZE	BODY COLOR
MIL-DTL-38999 Series 1 - 4	DRK276-12	12	Yellow
	DRK276-16	16	Blue
	DRK276-20	20	Red
	DRK276-22	22	Brown
	DRK276-22M	22M	Green
	DRK276-22D	22D	Black

Wire Harness Tools

WIRE HARNESS SPOON

DMC's Wire Harness Spoon is used to assist in inserting new wires into existing wire harnesses. It helps thread new or repaired wires under tight cable ties, zip ties, string ties and cushion clamps.

The plastic construction of the wire harness spoon reduces damage when inserting wires because it will not damage ties or adjacent wires. There is less chance of nicks or cuts than with a metallic wire harness spoon. It can also be used to isolate cable ties for safe cutting to prevent damage to wire insulation.

The **WHS-1** is Orange in color and .875" wide by 6" long.

CABLE TIE REMOVAL TOOL

Now you can quickly remove cable ties without damaging the wire harness. The safety guards on the tip of the MG cable tie removal tools slide behind the cable tie strap to prevent the sharp blades from contacting and damaging the bundled items. The ergonomic, cushion grip handles and scissor action produce a clean cut.

Also use the MG series cable tie removal tools when repairing and retrofitting wire harnesses & hose assemblies, removing packaged items, prototyping & testing products, and many other factory and field uses.

These cable tie removal tools provide a long life when cutting plastic, thin copper wire, and aluminum wire AWG 10 & smaller. Each tool is made of heat treated alloy steel with a Rockwell hardness range of 53-58Rc.

PART NUMBER	CUTS CABLE TIE SIZES	TOOL LENGTH	TOOL WIDTH	DESCRIPTION
MG-1300	18 lb. to 250 lb.	6.49"	2.35"	Short Handle Length with Pointed Nose for Tight Spaces

Contact Retention Test Tools

Typical application showing tool testing pin contacts.

The quality assurance test most often overlooked is retention (proper seating of contacts). This important test can now be performed simply and in a matter of seconds with the DMC retention testing tools.

These tools are for checking the retention of pins and sockets in electrical connectors. The tester pin and socket tips are aluminum. All tips are replaceable. A nylon hand protector is provided with each tool. The tools can be preset at the factory to your request.

Insert tester into or over a contact so that the tester and contact are in a straight line. Hold in this position throughout the test. Use pin end with a socket contact and the socket end with a pin contact.

Apply pressure to tester until the indicator band is covered by the slide. If contact is still firmly retained, the retention is satisfactory.

TOOL PART NUMBER	RANGE POUNDS
HT250-1	1.5 THRU 3.0
HT250-2	3.2 THRU 5.5
HT250-3	4.0 THRU 8.0
HT250-4	7.0 THRU 18.0
HT250-5	17.0 THRU 25.0
HT250-6	24.0 THRU 40.0

Notice: The above part numbers apply to retention tools only (less tips). All tips must be purchased under separate part number.

CONTACT SIZE	COLOR CODE	SOCKET TESTER	PIN TESTER
12	Yellow	67-012-01	68-012-01
16	Blue	67-016-01	68-016-01
20	Red	67-020-01	68-020-01
22, 22M, 22D	Brown	67-022-01	68-022-01
23	Black	67-023-01	68-023-01

DMC recommends that the lightest pressure be used to test proper installation of electrical contacts. Three to five pounds is adequate to test most installed contacts. Additional information is available. Please consult DMC.

Retention Calibration Equipment

DMC DANIELS[®]
MANUFACTURING
CORPORATION

CONTACT RETENTION TEST TOOL CALIBRATION EQUIPMENT

The RTCG-75A Retention Tester Calibration Gage is supplied to support in-house calibration of DMC HT250 Series Retention Testers. It incorporates the latest Alphatron® digital test technology, and is self-contained and portable.

The tester is supplied in a protective case with calibration certificate to NIST (accuracy 0.5% full scale to 75 pounds force).

Contact Gages

CONTACT GAGES

Contact Gages are used to determine the size of a contact's mating end (sizes 12-22) which then aids in selecting the proper installation and/or removal tooling.

Gage size of a contact is determined by matching a contact gage with the contact mating end and noting the size of the best fitting gage. To gage pins, start with the smallest gage and work your way up the scale; the first gage that fits over the pin is the size of that pin. To gage sockets, start with the largest gage and work your way down the scale; the first gage that fits inside the socket is the size of that socket.

The gage sizes are stamped on the tool and all contact gages are color coded for correct size identification. The gage end used for measuring socket contacts is marked with an "S". And the gage end used for measuring pin contacts is marked with a "P".

CAUTION: These tools are not to be used as a pin straightener.

P/N	SIZE	COLOR
CG23	23	BLACK
CG10	10	GRAY
CG12	12	YELLOW
CG16	16	BLUE
CG20	20	RED
CG22	22	BRONZE

Connectors may contain several different size contacts.

MIL Spec Circular Indent Crimp Tools

**MODELS: MH801, MH802,
MH803, MH804, GS100-1
& GS200-1**

When special conditions call for a new tool design, we make every effort to utilize the components of existing tools which have been proven reliable both in field use and controlled test programs.

Such is the case with this tool series. The design of certain shielded contacts requires two additional crimping operations. One for the shield crimp sleeve, the other for the outer body. All of the tools give a concentric circular crimp configuration required by certain shielded contacts to insure compatibility with connector inserts and installing or removal tools in rear release applications, and/or maintain consistent electric impedance. Thus an indenter pattern which conforms to the appropriate military drawing (see chart for specific part numbers) was adapted to our familiar standard and miniature tool frames. (Note: On the MH801 MH802, MH803, and MH804 tools, in addition to the four opposing indenters these tools also have four retainers which encompass the contact prior to the initiation of the crimping operation thus assuring concentricity.)

A full complement of positioners, inspection gages, and other accessories are available for these tool frames. The GS100-1 & GS200-1 tools are approximately 9 3/4" x 2 1/2" x 1 1/4" and weigh 15 oz each. The MH801, MH802, MH803, & MH804 tools are 6 3/4" in length and weigh approximately 10 oz each.

The technical section on pages 100 to 103 list the part numbers of standard M39029 contacts which require these tools; however, the concept may be adapted to other applications. Consult DMC for specific details.

Pneumatic versions of these tools are also available. Consult DMC for details.

Circular Indent Crimp Tools

CIRCULAR CRIMP TOOLS

DMC manufactures a range of Circular Indent Crimp Tools used primarily for outer shield terminations in contacts. These tools are capable of crimping a circle as small as 0.040" and as large as 0.262". Due to the nature of crimping a complete circle, with four equal segments each tool is specified for a certain diameter. See the charts on this page for diameter sizes and part numbers.

Special Application Indent Crimp Tooling

BIASED CRIMP TOOLS (MODELS SC8 & MH993)

Our Biased Crimp tools have a 4 indent pattern with flat-tipped indenters that are offset at an angle of 45 degrees to produce a radial or spiral pattern around the wire barrel, typically used with seamed or formed barrel contacts. This indent pattern is also useful for holding springs (or spring like devices) to a tube or solid rod. We offer two Biased Crimp tools, the SC8 for sizes 12 thru 26 AWG and the MH993 for 20 thru 32 AWG.

The model **SC8** has single flat-tipped indenters and accommodates wire sizes 12 thru 26 AWG (the miniature to sub-miniature range). It accommodates the TP series positioners and is easily identified by a distinctive black body and grey handle grip. It is 9 $\frac{1}{4}$ " in length and weighs approximately 15 oz. Gaging is accomplished with the G125 "GO/NO-GO" gage.

The pneumatic power version of this tool is the WA27AJ.

The model **MH993** has double tipped indenters and accommodates wire sizes 20 thru 32 AWG (the miniature to sub-miniature range). It accommodates the K series positioners. It is 6 $\frac{3}{4}$ " in length and weighs approximately 10 oz. Gaging is accomplished with the G125 "GO/NO-GO" gage.

The pneumatic power version of this tool is the WA22BC.

OTHER MID-RANGE TOOLS

The **M316** is designed for crimping Sundstrand Aviation contacts #5905143 onto 16 AWG solid wire.

The **M322** is designed for Therm-X Terminal Assembly (pin and socket) contacts.

The **M327** is designed for Greene Tweed 5672-1998 (pin and socket) contacts.

Mid-Current Range Adjustable Indent Crimp Tools

WA27-309-EP

WA27-300BT-EP

For power supply and power management applications, DMC offers our Industrial Mid-Current Range Adjustable Crimp Tools which have virtually limitless applications within the specified **wire range of 6 through 18 AWG**. The tools are used widely in the marine, rail, power generation, solar, and heavy transportation industries.

The Mid-Current Range Adjustable Crimp Tools are similar to our Standard Adjustable indent Crimp Tool but have an enlarged crimp cavity to accommodate mid-current power contacts. Turret heads and positioners are available to adapt the tool frames to your specific contact/wire combination. The 8 impression crimp assures absolute maximum tensile strength with almost every closed barrel contact. Special indent configurations are available upon request.

For proper operation, the tool must be mated with a multi-position turret head (or a single-position positioner). These are attached by orienting the positioner in the keyed position and by tightening the hex socket screws provided as part of the positioner.

A permanent dataplate is affixed to all turret heads and positioners. This plate lists specific contact part numbers, the corresponding position color code (for 3 position turret heads), and suggested selector depth settings for the wire size being used.

On most models, crimp depth is controlled by a position selector knob located

on the tool frame. The operator simply dials the desired step for the wire being used. This setting can be secured by use of a locking pin or safety wire.

As with our Military Standard crimp tools, the cycle controlled ratchet assures a complete crimp every time. The carefully engineered design achieves the absolute maximum mechanical advantage.

Periodic gaging is recommended to insure accurate calibration. This can be done easily by setting the tool selector knob to the designated position and checking indenter closure with the "GO/NO-GO" gage designated for each tool.

These tools measure 9 $\frac{3}{4}$ " x 2 $\frac{1}{2}$ " x 1 $\frac{1}{4}$ " approximately and weighs less than a pound.

NOTE: Crimping wires and contacts in this range requires increased hand force in comparison with other common hand crimpers, therefore use of this hand tool should be limited to short run production and maintenance applications. indenter closure with the "GO/NO-GO" gage designated for each tool.

These tools measure 9 $\frac{3}{4}$ " x 2 $\frac{1}{2}$ " x 1 $\frac{1}{4}$ " approximately and weighs less than a pound.

MID-CURRENT RANGE PNEUMATIC TOOLS

WA27-300BT-EP is the pneumatic equivalent to the M300BT, length 15", diameter 2 $\frac{3}{4}$ ", weight 119 oz.

WA27-309-2C is the pneumatic equivalent to the M309, covering all 8 selector settings, length 12", diameter 2 $\frac{3}{4}$ ", weight 80 oz..

WA27-309 is the pneumatic equivalent to the M309, covering the lower 4 selector settings for AWG sizes 12-18, length 10", diameter 2 $\frac{3}{4}$ ", weight 50 oz.

WA27-309-EP is the pneumatic equivalent to the M309, with an extra pneumatic cylinder which provides more power for crimping the upper 4 selector settings for AWG sizes 8-14, length 15", diameter 2 $\frac{3}{4}$ ", weight 119 oz.

Mid-Current Range Tools are featured on pages 92 to 95.

The **M320** is designed for Siemens Industrial Automation contacts, 6FX2003 Series. The M320 crimps both the conductor and the insulation. This tool is not available in a pneumatic version.

Dedicated Application Indent Crimp Tooling

TWO-LEVEL INDENT CRIMP TOOL FOR BURNDY YHMM SERIES CONTACTS (MODEL LH8)

The LH8 tool produces both conductor and insulation crimps simultaneously on Burndy YHMM series contacts used in many aircraft wiring systems (Boeing contact designations BACC47DE4 & BACC47DE5). It is functionally comparable to the Burndy M10S-1 crimp tool with S1 Die & SL-53 Stop Bushing (Combination).

The tool comes with a dedicated turret head positioner, LH281. It is gaged with gages G687 for the conductor & G743 for the insulation. The tool is approximately 9 $\frac{3}{4}$ "x 2 $\frac{1}{2}$ " x 1 $\frac{1}{4}$ " and weighs 15 oz. The pneumatic power version of this tool is the WA27LH.

MIL-C-22442/32-1 CLAMPING RING CRIMP TOOL

The GS217 is designed to crimp clamping and retaining rings onto cable or wire in accordance with MIL-C-22442/32-1. The tool has 3 selector settings which crimp from 0.150 to 0.195". The tool is approximately 9 $\frac{3}{4}$ " x 2 $\frac{1}{2}$ " x 1 $\frac{1}{4}$ " and weighs 15 oz.

The pneumatic power version of this tool is the WA27AD. The assigned Turret Head is the SH556 which accepts cable diameters from 0.110" to 0.195". Positioner TP975 is also available to crimp Astrocom Electronics' Clamping Ring P/N 20822.

Other special indent tools are available, please consult DMC.

Special Application Indent Crimp Tooling

ULTRA PRECISION CRIMP TOOL (MODEL MH800)

All DMC tools are designed and built to the highest standards of precision and quality, but some applications call for more. One such case is contacts which have extremely thin wire barrel dimensions. The answer to this demand is the model **MH800** Ultra Precision Crimp Tool which utilizes the same basic components as the Model AFM8 (M22520/2-01) Crimp Tool with tighter gaging tolerances and a special indenter tip configuration that assures a uniform flow of metal during the crimping operation.

The model **MH800** accommodates wire sizes 20 thru 32 AWG (the miniature to sub-miniature range). It accommodates the K series or M22520/2-XX positioners and is easily identified by a distinctive orange handle grip. It is 6 $\frac{1}{4}$ " in length and weighs approximately 10 oz. Gaging is accomplished with the G100 "GO/NO-GO" gage. The pneumatic power version of this tool is the WA22H.

STAINLESS STEEL INDENTER CRIMP TOOL (MODEL MH820 & MH820P*)

The **MH820** Stainless Steel Indenter Crimp Tool is similar to the AFM8 miniature adjustable indent crimp tool, but has indenters made from stainless steel to crimp harder materials and extend the indenter life.

The **MH820** has eight crimp settings from 0.011" to 0.038" and is gaged with the G212 Go/No-Go gage. The tool is 6 $\frac{1}{4}$ " in length and weighs approximately 10 oz. The pneumatic power version of this tool is the WA22M.

Special Application Indent Crimp Tooling

To keep pace with the most recent developments in technology, DMC is often called upon to custom engineer tooling for the medical, telecommunication, electronics, aerospace, and alternative energy industries. Some of these applications require unique indent configurations, special materials, and multi-stage crimp terminations. Some of the special application tools we've developed are listed on the following pages.

DMC is ready and capable to help satisfy your tooling needs with custom engineered tools and dies. Contact us with your requirements.

FINE TIPPED INDENTER TOOLS (MODELS MH835 & MH992)

The **MH835 & MH992** Fine Tipped Indenter tools are similar to the AFM8 miniature adjustable indent crimp tool, but have sharper indenter tips measuring .07 inches. The **MH835** tool produces a 4-indent crimp while the **MH992** tool produces an 8-indent crimp.

The **MH835** has eight crimp settings from 0.0070" to 0.0325" and is gaged with the G619 Go/No-Go gage. The pneumatic power version of this tool is the **WA22BH**.

The **MH992** has eight crimp settings from 0.0070" to 0.0330" and is gaged with the G822 Go/No-Go gage. The tool is 6 $\frac{3}{4}$ " in length and weighs approximately 10 oz. The pneumatic power version of this tool is the **WA22AE**.

BETA Backshell Accessory Torque Tools

DMC offers a complete line of Adapter Tools and Torque Tools for holding and torquing circular connectors during the installation and removal of accessories (backshell, strain relief, or EMI/RFI shielding hardware).

The evolution of circular connectors has produced many mechanical configurations which have more precise dimensional tolerances and electrical characteristics than any other mechanical

component used in modern electrical systems. The associated tooling must meet the same level of precision to apply the connector to its intended purpose. Until now, very little attention has been focused on the tooling which is used to mount strain-relief backshells and other accessories to wired connector assemblies. This is why the BETA Connector Mate® system was developed.

This unique concept is based upon adaptor tools which are configured to mate with a specific connector series and shell size regardless of keying arrangement. They may be used simply as hand holding devices for easy tightening, or, for more exact requirements, DMC offers a wide variety of circular wrenches, strap wrenches, torque meters, and vises which can be used in a variety of combinations.

Additional catalog information is available, contact DMC

*BAYONET COUPLINGS ONLY – THREADED RECEPTACLE ADAPTOR SETS ARE NOT AVAILABLE.

*MATERIAL: ALUMINUM STEEL TOOLING IS AVAILABLE. CHECK WITH DMC FOR DETAILS.

NA (Not available at time of printing – consult DMC)

SIMPLE ORIENTATION TO THE CONNECTOR

All adaptor tools have an indicator (Dot) which visually orients it with the master key on the connector. This enables the user to orient the two components for mating without trial and error fumbling.

ECONOMICAL, RELIABLE, AND AVAILABLE

There is not a precision system for holding circular connectors available anywhere which is more economical, reliable, or readily available to meet your needs than the DMC Beta adaptor tools.

Typical Mated Pair Connectors

Complete backshell tooling guide available. Please consult DMC for details.

EMI/RFI Band Application System

The termination of EMI/RFI shielding materials is a specialized science in today's aerospace wiring systems. Application tooling is a critical factor in the overall performance of the wiring system components. DMC has worked closely with the world's leading connector accessory manufacturers and standards organizations to develop the necessary tooling and accessories to meet the stringent demands of aerospace and defense system contractors. The resulting products afford the user a repeatable and reliable means of terminating shielding on aerospace wiring systems. Tooling is available for all bands qualified to AS85049/128.

M81306/1 SERIES ONE-STEP BANDING TOOL

DMC's One-Step Banding Tools are designated for **M85049/128-3**, **M85049/128-4**, **M85049/128-7** and **M85049/128-8** "stamped buckle" bands. These tools tension, bend, and cut the band in one operation.

(See page 81 for available tool and accessory combinations)

DBS-2100 is the .250 Wide Band Application Tool **M81306/1A**

DBS-2200 is the .125 Wide Mini-Band Application Tool **M81306/1B**

One-Step Tool Application

Stamped Buckle Band (Band style must be matched to tool. See next page for part number association)

M81306/2 SERIES TWO-STEP BANDING TOOLS

DMC's Two-Step Banding Tools are designated for **M85049/128-1**, **M85049/128-2**, **M85049/128-5** and **M85049/128-6** "welded buckle" bands. These tools tension and cut the band and leave an extended cut off tab. The second step provides an extra level of security by utilizing a roll-over tool to bend the cut-off tab over a full 180 degrees in a second operation.

DBS-1100 .250 Wide Band Application Tool **M81306/2-01A**

Band Configurations

DANIELS MANUFACTURING CORPORATION®

NOTE: Always install M85049/128-X bands with 2 layers of band through the buckle.

M85049/128 Shield Termination Bands are available in two distinct configurations, Stamped and Welded Buckles, and two different widths, .250 in. (6.350 mm) and .125 in. (3.175 mm). The bands come flat or pre-coiled and ready for use.

The buckle for the **M85049/128-3**, **M85049/128-4**, **M85049/128-7**, and **M85049/128-8** bands is a STAMPED buckle. This configuration is low-profile style with a slot for the other end of the band to pass through.

The buckle for the **M85049/128-1**, **M85049/128-2**, **M85049/128-5**, and **M85049/128-6** bands is a WELDED buckle. This configuration is folded style with a loop for the other end of the band to pass through.

M85049/128-1, M85049/128-2, M85049/128-5, and M85049/128-6 Welded Buckle Bands

One-Step Banding Tool System

for M85049/128-3, /128-4, /128-7, and /128-8 bands

DBS-2100 .250 WIDE BAND APPLICATION TOOL M81306/1A:

- Size and Weight: 6.71" x 6.75" x .92", 1.02 lbs.
- Tension Range: 145–155 lbs
- Cut-off blades are replaceable with Blade Replacement Kit:
DBS-2100-BRK

DBS-2100 & DBS-2200 (M81306/1A & M81306/1B)

(Other Combinations of Tools and Accessories Available
- See Page 79-81 for details)

ONE-STEP BAND APPLICATION TOOLS

The One-Step Band Application Tools are built to SAE AS81306/1 specifications and designed to install **M85049/128-3**, **M85049/128-4**, **M85049/128-7**, and **M85049/128-8** "stamped buckle" bands. These tools are constructed to survive the demands of production and maintenance use, and remain precisely adjusted to provide a quality band termination.

The tension-lock system gives the operator a positive indication when the precise tension has been applied. The cut-off handle easily cuts, bends, and locks the shield band in one step.

DBS-2200 .125 WIDE MINI-BAND APPLICATION TOOL M81306/1B:

- Size and Weight: 6.71" x 6.75" x .92", 1.02 lbs.
- Tension Range: 75–85 lbs.
- Cut-off blade is replaceable with Blade Replacement Kit:
DBS-2200-BRK

(Shown at rest with white line visible)

DBS-CG4D (includes fixture with stand and digital readout meter)

Field Verification Inspection Gages are available to check the tension of the DMC One-Step Band Tools. These gages have a precise compression mechanism which has a sequence of indicators to verify that the applied tension is within the specified range for the band which is being applied. It is recommended to check the tension periodically, and if it needs adjustment, the instructions and accessories are provided by DMC for that purpose. The .250 width band tool (**DBS-2100** Series) requires the **DBS-CG7 (M81306/1C)** gage, and the .125 width band tool (**DBS-2200** Series) requires the **DBS-CG8 (M81306/1D)** gage.

DMC also offers an Electronic Calibration Instrument for Calibration Laboratory operations. The Part Number **DBS-CG4D** Electronic Calibration Instrument will allow the operator to gage the exact tension produced by the tool, and therefore, one instrument can be used with either the .250 band width tool, or the .125 band width tool. This instrument is calibrated by DMC, and traceable to NIST.

Part Numbers and ordering information for the Field Verification Inspection Gages and the Electronic Calibration Instrument can be found in the part tables on page 80 under One Step Application Tools, Accessories, and Components.

Use verification equipment in accordance with DMC instructions **DBS-CG7-DS**, **DBS-CG8-DS** or **DBS-CG4D-DS**.

Two-Step Banding Tools System

for M85049/128-1, /128-2, /128-5, and /128-6 bands

DBS-1100 AND DBS-1200 HAND OPERATED BANDING TOOLS

TWO STEP BAND APPLICATION TOOLS

DBS-1100 (M81306/2-01A) .250 WIDE BAND TOOL

- Size and Weight: 1.38" x 5.5" x 7.5", 1.4 lbs.
- Tension Range: 140–160 lbs.
- Cut-off blade: replaceable with DBS-1100-7

DBS-1200 (M81306/2-02B) .125 WIDE MINI-BAND TOOL

- Size and Weight: 1.38" x 5.5" x 7.5", 1.4 lbs.
- Tension Range: 70–90 lbs.
- Cut-off blade: replaceable with DBS-1100-7

DBS-R03 (M81306/2-01C) FOR .250 WIDE BANDS

DBS-R05 (M81306/2-02D) for .125 WIDE BANDS

PBT1100 AND PMBT1200 PNEUMATIC BAND APPLICATION TOOLS

The PBT1100 & PMBT1200 series Pneumatic Band Application Tools are lightweight, dependable, and easy to operate. Many of the components are interchangeable with the corresponding hand tool. DMC's Pneumatic Two-Step Banding Tools are compatible with all currently available bands to **M85049/128**.

PBT1100 .250 WIDE BAND APPLICATION TOOL

- Size and Weight: 8.75" L, 1.52 lbs.
- Tension Range: 140–160 lbs.

PMBT1200 .125 WIDE MINI-BAND APPLICATION TOOL

- Size and Weight: 8.75" L, 1.52 lbs.
- Tension Range: 70–90 lbs.

VERIFICATION OF TWO-STEP EMI/RFI BAND TOOLS

DMC's Two-Step Band Application Tools may be adjusted and verified to insure correct band tension. In order to make this operation simple and efficient for field use, DMC designed and patented a compression fixture system which uses a Go/No-Go Gage to measure the tool tension. Ordering information for the field verification equipment (Part Numbers **DBS-CG2A** and **DBS-CG3A**) can be found in the charts in the following pages.

The DBS-CG1 Laboratory Calibration Instrument will allow the operator to measure the exact tension produced by the tool.

DBS-CG1

A free standing holding fixture is available (**DBS-CG1-F**) to aid the calibration process by securing the **DBS-CG1** and banding tool in place. The **DBS-CG1-F** holding fixture secures the banding tool in place during calibration. This fixture only works with the Two-Step Tools and **DBS-CG1** Calibration Instrument (Banding tools and **DBS-CG1-F** are sold separately).

DBS-CG1-F

Open Frame Crimp Tools

M22520/5-01 (HX4) M22520/10-01 (HX3)

The DMC HX4 and HX3 series crimp tools feature a system of interchangeable dies which eliminate the need for separate fixed die crimp tools for each and every different application. Many maintenance and production organizations have standardized on one of these models, thus eliminating the cost associated with maintaining and calibrating bulky inventories of single purpose, dedicated tools.

TYPICAL DIE SET

Tremendous flexibility and cost advantages exist with this crimping system due to the wide variety of military and proprietary interchangeable dies available for these tool frames. As new requirements evolve, a new set of dies is all that's required to meet the demand.

Crimping dies are snapped into the tool frame and retained in place by internal spring clips. They may be permanently secured, if desired, by pressing a roll pin into the holes provided.

The tool frames are equipped with a positive ratchet assembly which controls complete handle movement in both directions.

HEXagonal crimp dies are available in a variety of combinations having single, double, and even triple cavity design. These dies accommodate most coaxial and triaxial connectors and contacts conforming to MIL-DTL-39012, AS39029, and numerous proprietary configurations. Other designs are available for coaxial connections requiring different termination techniques.

Dies in various crimp patterns are also available for insulated and uninsulated terminal lugs, wire splices and end caps relating to M7928, MS17143, MS25036, MS25181, MS27429, MS25274, MS20659, M81824, MS21003 through MS21015, and commercial part numbers. Several power contacts too large for conventional hand tools are also covered by interchangeable dies for the standard tool frame (HX4).

If your application requirement is not already covered by one of our standard dies our engineering department will be pleased to discuss a design to suit your needs.

The HX4 is 11" in length and weighs approximately 21 oz. The HX3 is 9" in length and weighs 11 oz.

DMC169A (M83521/7-01) & DMC169 (M83507/9-01) TOOL KITS

The DMC169A and DMC169 tool kits consist of an HX4, Blade Micrometer, and 27 die sets. Each tool kit covers Mil-Spec shielding ferrules (MS21980/MS21981) and Mil-Spec coaxial contacts (M39029/6/13/14, M39029/7/8, M83733/13/14 and 0N089558).

* Die part numbers ending in "P" indicate that the die set has an alignment guide pin.

Battery Powered Hydraulic Open Frame Crimp Tools

GET THE PORTABILITY OF A HAND TOOL WITH THE STAMINA OF A POWER TOOL!

DMC is pleased to present our battery powered hydraulic tools to crimp copper and aluminum cable #26 to #8 AWG with DMC "Y" Dies (M22520/5-XX and others). These tools are equivalent to DMC's **HX4** hand tool and use the same Y-dies.

Working on today's electrical systems calls for increased mobility and repeatable, consistent crimping force. To satisfy this need, DMC offers a battery powered hydraulic crimp tool designed to integrate your current tooling systems. The ergonomic tool body helps reduce workplace injuries and eases operator fatigue keeping costs low and production high.

DMC battery powered tools have been engineered to work with our existing Y-die series and compliment our established crimp tools. And, as always, if we don't have a die to meet your needs, we'll engineer and manufacture it for you.

ADJUSTABLE DIES FOR INSULATED TERMINALS & SPLICES

COLOR	SIZE	P/N
Yellow	12-10	Y670
Blue	16-14	Y671
Red	22-18	Y672
Yellow	26-24	Y678
Red/Blue	22-14	Y1060

Adjustable Crimping Dies accept terminations which conform to AS7928, AS25036 (class 1 and 2) and other military or commercial specifications.

HXE4B

The **HXE4B** Battery Powered Hydraulic Open Frame Crimp Tool is a hand held, self-contained crimp tool. The crimp head, battery, and pump unit are contained in one ergonomic tool body and weighs about 4 pounds. It is equivalent to DMC's **HX4** hand tool and uses the same Y-dies. (See page 82, 83 and 87)

HXE4AB

This tool is available with an optional spring loaded push rod to hold the product in the crimping position (dies normally closed). (P/N **HXE4AB**)

FEATURES

- Ergonomic design allows one-handed operation
- Die automatically opens when crimp is complete
- Indicating complete crimp pressure cycle has been achieved
- Head rotates 350 degrees
- Red LED to display the charge status of the battery

HXE4B

CRIMP CAPACITIES

- #26 to #8 AWG (copper terminations)
- Max. Crimp Force: 1.5 Tons (13.3 kN)
- Avg. Crimp Time: 2 seconds
- Avg. Crimps per Charge: 200
- Charge Time: 15 mins (Avg.)

SPECIFICATIONS

- Length: 14.5" (368 mm)
- Width: 2.87" (72.9 mm)
- Depth: 4.5" (114.3 mm)
- Weight (with battery): 3.18 lb (1.4 kg)
- Sound Level: 75 db(A) at 1 meter
- Vibration: <8.2 ft/s² (2.5 m/s²)
- Hydraulic Oil: Shell Tellus® T-15

TOOL INCLUDES: Carrying Case, Gage, Die Removal Tool, Two 18v Batteries (p/n **HDE-LI-B**), One Battery Charger (p/n **HDE-LI-120C**).

Dies must be ordered separately.

X-Die Pneumatic Tool Bench Press Style Crimp Tool

PHX3 PNEUMATIC TOOL

COMPATIBILITY WITH EXISTING CRIMP DIES

The **PHX3** accommodates all M22520/10-XX military and Daniels "X" series crimp dies. This affords total utilization of existing dies and total interchangeability with **M22520/10-01** (Daniels **HX3**) hand tool frames (see pages 82 and 83).

FULL CYCLE CONTROL

Full die closure is assured on every crimp. The internal cycle control network will not allow the tool to open until complete closure is attained.

OPERATOR SAFETY FEATURES

The **PHX3** is equipped with a crimp safety guard to remind users to keep fingers clear of the crimp dies.

FULL PNEUMATIC OPERATION

Standard clean, dry shop air at the recommended pressure (100 - 120 psi) is all that is required to operate the **PHX3** tool. There are no electrical or hydraulic requirements.

FOOT ACTIVATION

If benchtop use is required, a foot activated tool is available (P/N **PHX3A**).

BENCH MOUNT

The standard bench mount (P/N **BM-2A**) is available from DMC.

PHX3A crimp tool with optional bench mount.

Benchtop Press Hand Tools

BENCH PRESS STYLE OPEN FRAME CRIMP TOOLS UDT4 & UDT3

The **UDT4** & **UDT3** tools have the die frame opening on the opposite side of the tool frame from the **HX4** & **HX3** so the tool can be used as a portable bench top press or as a hand tool. The tool frames are equipped with the same positive ratchet assembly and accept the same "Y" and "X" series dies. When used as a bench top press, the operator gains a greater mechanical advantage, thereby reducing operator fatigue.

Pneumatic Open Frame Tool

HX23 BENCH CRIMP PRODUCTION PRESS

COMPATIBILITY WITH EXISTING CRIMP DIES

The HX23 accommodates all M22520/5-XX military and Daniels "Y" series crimp dies (see pages 83 and 87).

This affords total utilization of existing dies and total interchangeability with M22520/5-01 (Daniels HX4) handheld tool frames (see page 82).

FULL CYCLE CONTROL

Full die closure is assured on every crimp. The internal cycle control network will not allow the tool to open until complete closure is attained. A simple procedure is available to open the tool in cases where a complete cycle cannot be effected.

A secure method is provided to prevent unauthorized personnel from defeating the cycle control system.

HANDS FREE OPERATION

There are no awkward levers or mechanisms used to open or close the crimp dies. These operations waste time and distract the operator's attention.

TWO STAGE CRIMP PROCESS FOR OPERATOR SAFETY

When the tool is in the normal condition, the crimp dies are fully open where contact assemblies can easily be inserted. A touch of the foot valve releases the dies to a safe gripping position (spring pressure only). When the operator is satisfied that the contact assembly is positioned correctly and hands are in a safe position, another actuation of the same foot valve completes the crimp and quickly returns the die to the open position for removal of the crimped assembly and loading of the next parts.

MOUNTING

The HX23 is supplied with a stable bench mount which can remain unattached for portability. Or, can be mounted to a workstation by installing fasteners through the holes provided.

The HX23 Production Crimp Press

SAFETY FEATURES:

- 2 Step Crimping Process
- Emergency Stop Switch

can be used in horizontal or vertical positions.

OPERATOR SAFETY FEATURES

The HX23 is equipped with a transparent guard which affords the protection, but does not restrict vision.

The Hands Free Operation system allows the operator to position the contact assembly while the die is under spring pressure only.

The operator is then free to let the tool hold the contact assembly during the crimp cycle while the operator's hands and fingers are a safe distance from the crimping die.

The HX23 foot valve assembly is constructed with a protective shroud to prevent accidental actuation. For operation the operator places their foot under the shroud to depress the pedal.

FULL PNEUMATIC OPERATION

Standard clean, dry shop air at the recommended pressure is all that is required to operate the HX23 tool. There are no electrical or hydraulic requirements.

ADJUSTABLE DIES FOR INSULATED TERMINALS & SPLICES

COLOR	SIZE	P/N
Yellow	12-10	Y670

GMT Series Precision Crimp Tools

DMC provides custom and standard crimp tools manufactured to OEM connector supplier or user requirements. Often these tools are specified as comparable in function to the OEM connector supplier tool. Numerous applications such as open barrel (stamped and formed) contacts, insulated and non-insulated terminals, splices, end caps, coaxial connectors, and wire fittings of all types are covered by these tools. The rugged construction of this tool assures repeatability and long life cycle. You can rely on DMC experience for quality and cost effective performance.

GMT General Purpose Tools: Many standard OEM applications are covered by the GMT general purpose tool series. The jaws are fixed, and the locator (where used) is configured to hold the contacts precisely in the correct location for optimum crimping.

GMT1090 (M22520/44-01) TOOL FOR M81824/12-XX COLD APPLIED SPLICES

The **GMT1090 (M22520/44-01)** Hand Crimp Tool crimps Tyco's Cold Applied Environmental Splices (M81824/12-xx) sizes 26-20, 20-16, 16-12 AWG. This precise tool has a locator which is configured to hold the splice in the correct location while either wire is being terminated. No heat, or heat gun, required.

Pneumatic & Battery tools are available to cover the GMT tool series. See page 103 for part numbers.

GMT232 (M22520/37-01) TOOL FOR M81824/1, /6, /7, /8, /9, /10, /11, /13, & /14 ENVIRONMENTAL SPLICES

The **GMT232 (M22520/37-01)** Hand Crimp Tool crimps low profile environmental splices (M81824/1). The GMT232 is the most popular tool to cover the range of 12 (yellow), 16 (blue), and 20 (red) splices for low profile environmental splice applications. The GMT232 has a locator which is configured to hold the splice in the correct location while either wire is being terminated. This tool is comparable to the popular Tyco AD1377. Pneumatic Equv. **PMT232**

GMT277 (M22520/38-01) Tool for M20659 UNINSULATED TERMINALS

The **GMT277** Tool is Qualified to AS22520/38 as a replacement for the superseded M22520/24 plier crimp tool. All crimp cavities are the same, but the GMT277 has a cycle control ratchet, and additional leverage for more consistent crimp termination.

GMT1005 TOOL FOR UNINSULATED TERMINALS

The GMT1005 Hand Crimp Tool terminates uninsulated terminals sizes 10 to 22 AWG. This tool is comparable to Tyco Electronics' 49935 hand tool. Pneumatic Equv. **PMT1005**.

Battery Powered Hydraulic GMT Series Crimp Tools

DMC is pleased to present our GMT Series battery powered hydraulic tools to crimp open barrel (stamped and formed) contacts, insulated and non-insulated terminals, splices, and end caps, coaxial connectors, and wire fittings of all types are covered by these tools. Just like with the hand tools, locators are included for applications where they are needed to hold contacts in the correct location for optimum crimping.

GMTExxxB

The **GMTExxxB** Series Battery Powered Hydraulic Commercial Standard Crimp Tools are hand held, self-contained crimp tools. The crimp head, battery, and pump unit are contained in one ergonomic tool body and weigh about 4 pound each. They are equivalent to DMC's GMT Series hand tools.

TOOL INCLUDES: Carrying Case, Two 18v Batteries (p/n HDE-LI-B), One Battery Charger (p/n HDE-LI-120C).

GMTE232B FOR M81824/1-XX ENVIRONMENTAL SPLICES

The **GMTE232B** Tool is the battery powered equivalent to our GMT232 (M22520/37-1) hand tool for low profile environmental splices (M81824/1-XX). The **GMTE232B** is the most popular GMT Series tool to cover the range of 12 (yellow), 16 (blue), and 20 (red) splices for low profile environmental splice applications. This precise tool has a locator which is configured to hold the splice in the correct location while either wire is being terminated.

*See page 105, Col. 2

FEATURES

- Ergonomic design allows one-handed operation
- Jaws remain closed under spring pressure (pinch sides to open/load) for safety and holding termination in place.
- Head rotates 350 degrees
- Red LED to display the charge status of the battery

CRIMP CAPACITIES

- Max. Crimp Force: 4 Tons (35.6 kN)
- Avg. Crimp Time: 3 seconds
- Avg. Crimps per Charge: 100
- Avg. Charge time: 15 minutes

SPECIFICATIONS

- Length: 13" (330 mm)
- Width: 2.87" (72.9 mm)
- Depth: 4.5" (114.3 mm)
- Weight (with battery): 2.8 lb (1.3 kg)
- Hydraulic Oil: Shell Tellus® T-15 (or equivalent)

TOOL PART NUMBERS

- See page 105, column 2

PMT232 Pneumatic Crimp Tool

For M81824/1, /6, /7, /8, /9, /10, /11, /13, & /14 Environmental Splices

The **PMT232 Pneumatic Crimp Tool** crimps low profile environmental splices (M81824/1-xx), AWG range 12 (yellow), 16 (blue), and 20 (red).

The **PMT232** is **cycle-controlled** and has a locator which is configured to hold the splice in the correct location while either wire is being terminated. The tool is 8 inches long, 2 inches wide and weighs 2.5 pounds. Air supply requirements are 80-120 PSI (5.5 to 8.0 bar) clean dry air.

DMC provides custom and standard crimp tools manufactured to OEM or user requirements. The **PMT232** is functionally similar to Tyco Electronics's AD1377 and AD1377S.

The PMT232 can be hand held, or mounted on a bench stand (**P/N BM-2A**).

Hand and Battery Powered Versions are Available!

Battery Tool**

DCT Series Crimp Tools

DMC provides custom and standard crimp tools that are manufactured to connector OEM or user requirements. Often these tools are specified as comparable in function to the OEM connector supplier tool.

DCT4-XXX

The DCT series of crimp tools and dies accommodate most (insulated and uninsulated terminals and splices conforming to AS7928 insulated and uninsulated as well as numerous proprietary configurations.

Dies in various crimp patterns are also available for D-Subminiature, circular connectors, Red/Blue/Yellow "Heat-N-Seal" terminals, "MiniSeal" terminals, and low profile environmental splices (M81824/1-XX).

Dies are configured with single, double, triple and even quadruple crimp cavities.

Several models and types of tools comprise the DCT tool series. Some tools have removable (interchangeable) dies, and others have fixed cavities that are not removable.

If your application requirement is not already covered by one of our standard die sets, our engineering department will be pleased to discuss a design to suit your needs, consult DMC for details.

DCT4-XXX SERIES HAND CRIMP TOOLS

The sturdy construction of the DCT hand tools is superior to any tool made today. The handle will not flex or bend in any direction, therefore the maximum force and repeatability are achieved. The precision ratchet controls cycling of the tool and assures the same accurate crimp every time. The handle grips and the leverage system are designed for maximum ergonomic benefit.

The DCT tools are approximately 9 $\frac{3}{4}$ " x 3 $\frac{1}{8}$ " x 1 $\frac{1}{4}$ " and weigh 1.38 lbs.

EMC3300 Electro Mechanical Crimp Tool

EMC3300 Battery Powered Crimp Tool

- Advanced Ergonomic Tool Design with “Safe Distance” Trigger Closing Control
- Pre-Clamp Function to Improve Cycle Time and Quality
- Crimp Cycle Time is 1.3 Seconds
- 250 Crimps per Charge (typical battery life)
- Li-Ion 10.8 Volt Battery and Charger
- Built-in LED Light
- Data Retrieval Available
- Tool kit consists of a molded case, one battery and charger. Spare battery charger P/N HDE-MBC110. Spare battery P/N HDE-MBP108.
- Dies are sold separately, see Available Dies in the table below. This tool can accommodate some die sets which are supplied by connector sources. Consult DMC for details.
- Consult DMC for custom engineered die sets and special applications and die sets and configurations.

Ordering Guide

Hydrac™ Hydraulic 3.5 Ton Crimping Tool for HD36 Dies

HD36 MANUAL HYDRAULIC TOOL

HD36 Hydraulic Crimper is a combination of a lightweight design and the precise application of 3.5 tons force to crimp power contacts too large for conventional hand tools. This tool is designed to accept the entire family of D36 dies for crimping terminals, lugs or any other special applications.

The 3.5 ton crimp force is achieved through multiple actuations of the tool handle. The automatic relief valve "clicks" audibly when the proper crimp force has been applied to prevent over-compression. The tool head also rotates 360 degrees for easy accessibility in confined working areas. The hand tool is 8.5 inches long, weighs only 3.3 lbs, and is operated with one hand.

If your application requirement is not already covered by one of our standard dies, our engineering department will be pleased to discuss a design to suit your needs, consult DMC for details.

- 3.5 tons of die force.
- Interchangeable die sets.
- Automatic relief valve to prevent over-compression
- Release lever for relaxing crimp pressure and opening dies mid-cycle
- 180° rotating head for ease in confined work areas.
- Each tool supplied in a fitted carrying case

Battery Powered Hydraulic 4 Ton Crimp Tool for HD36 Dies

HDE36B BATTERY POWERED HYDRAULIC CRIMP TOOL FOR HD36 DIES

The **HDE36B** Battery Powered Crimp Tool offers the portability of a hand tool with the stamina of a power tool! It is a hand held, self-contained, 4 ton hydraulic crimp tool that is actuated with a single squeeze of the trigger.

This tool is designed to accept the entire family of **HD36** dies for crimping terminals, lugs or any other special applications. WIRE RANGE: #8 to #0 AWG* in many power applications, and .750 (19.05mm) in coaxial hexagonal crimping.

The **HDE36B** offers a solution where the volume of work exceeds the physical limits of a worker with hand tools, and hoses and cables are unwelcome or unsafe for the environment where the work is being performed.

The **HDE36B** battery tool is approximately 13.25" long, 2.87" wide, and 4.5" deep, weighs 2.8 lb with the battery installed.

TOOL INCLUDES: Carrying Case, Two 18v Batteries (p/n HDE-LI-B), One Battery Charger (p/n HDE-LI-120C).

DIE SELECTION: The crimping tool will accommodate all crimp dies listed on page 111. Other applications may be covered by this tool. Consult DMC for details.

* Wire range will vary depending on wire and terminal/contact.

FEATURES

- Ergonomic design allows one-handed operation
- Die automatically opens when crimp is complete
- Die can be retracted in mid-cycle to adjust connector
- Head rotates 350 degrees
- Red LED to display the current status of the unit

CRIMP CAPACITIES

- Max. Crimp Force: 4 Tons (35.6 kN)
- Avg. Crimp Time: 3 seconds
- Avg. Crimps per Charge: 100

SPECIFICATIONS

- Length: 13.25" (356 mm)
- Width: 2.87" (72.9 mm)
- Depth: 4.5" (114.3 mm)
- Weight (with battery) 2.8 lb (1.3 kg)
- Sound Level: 75 db(A) at 1 meter
- Vibration: <8.2 ft/s² (2.5 m/s²)
- Hydraulic Oil: Shell Tellus® T-15

Dieless Four Indent Crimpers

DMC's Dieless Four-Indent Crimpers provide a symmetrical four-sided crimp (at 90° intervals). Dies of a particular configuration are not needed. The crimp pressure against the resistance of the metal conductor assembly will cause the tool to crimp to a depth where there is metal to metal bottoming (gas tight crimp joint on aluminum and soft copper).

XHC136 REMOTE HEAD HYDRAULIC TOOL

The range of crimping capabilities starts with 6 AWG conductors and goes to 4/0 AWG conductors on copper, and 750 MCM applications on aluminum.

Triangle indent shape is standard. Optional indent designs are available. Consult DMC.

HC136B DIELESS BATTERY POWERED FOUR INDENT CRIMPER

HC136 DIELESS MANUAL FOUR INDENT CRIMPER

XHC136

The **XHC136** can be hand held crimp head (pump options below) or mounted. This is intended to crimp copper and aluminum lug terminals & splices. The **XHC136** crimps sizes 6 AWG to 4/0 AWG conductors on copper, and up to 750 MCM applications on aluminum.

HC136B

The **HCE136B** is a hand held, self contained battery crimp tool intended to crimp copper and aluminum lug terminals & splices. The **HCE136B** crimps sizes 6 AWG to 4/0 AWG conductors on copper, and up to 750 MCM applications on aluminum.

HC136

The **HC136** crimps sizes 6 AWG to 4/0 AWG conductors on copper, and up to 750 MCM applications on aluminum.

PUMPS

DMC offers several pump options that offer economical, efficient, reliable methods to power the **XHC136**. The powered pumps are: a pneumatic pump (P/N **HPU11M**), an AC electric pump (P/N **HPU14M**), and a DC electric battery pump (P/N **HPU13M**). Two portable manual pumps: a hand pump (p/n **HPU12M**) and a foot pump (p/n **HPU15M**). All pumps come with a heavy duty, ten-foot long hose and couplings (equipped with screw on MS fittings and dust covers) to complete the connection between pump and crimper (P/N **12-4040**).

Hydrac™ Hydraulic 5.5 Ton Crimping Tool for HD51 Dies

DMC DANIELS MANUFACTURING CORPORATION

HD51 Medium Duty Hydraulic Crimper is the most popular hand operated hydraulic crimper. The HD51 is still lightweight at 4.6 pounds, but the 5.5 tons of die force and the larger die configuration extends the range of crimping capabilities to 2/0 AWG* conductors in many applications. The HD51 Hydraulic Crimper utilizes rugged construction, lightweight materials, and comfortable handle grips for the best ergonomic advantage. The number of handle closures required to complete the crimp is reduced by the larger and more efficient hydraulic pump system. Other features are the following:

- Length: 14 inches (356 mm)
- Weight 4.6 pounds (2.08kg)
- Crimp force: 5.5 tons (48.93kN)
- Automatic relief valve to prevent over-compression
- Release lever for relaxing crimp pressure and opening dies
- 180° rotating head for ease in confined work areas.
- WIRE RANGE: (#12 to #2/0 AWG in many power applications, and .700 (17.78mm) in coaxial hexagonal crimping.

*Wire range will vary depending on wire and terminal/contact.

XHD51 Remote Hydraulic Crimp Head is a preferred solution for high yield applications on production lines and maintenance rework centers. A pumping system provides the hydraulic power to the remote crimping head, and the crimp head can be mounted in a stationary position, or used as a hand-held tool. Pump options are listed below. Other specifications that apply to the XHD51 are the following:

- Length: 7.1 inches (180.3mm)
- Weight 3.85 pounds (1.74kg)
- Crimp force: 5.5 tons (48.93kN)

DMC1383 Tool Kit contains the HD51 hand tool and all the dies for crimping insulated and uninsulated terminals and splices size 8 through 2/0. This tool kit is contained in a metal case with foam inserts that have contoured tool cavities, laminated instruction sheets permanently attached on a ring binder, and contents charts identifying the location of each tool.

WIRE RANGE: #12 to #2/0 AWG in many power applications, and .700 (17.78mm) in coaxial hexagonal crimping.

Pump options for the XHD51 crimp head:
 HPU11M: Pneumatic powered hydraulic pump
 HPU12M: Hand powered hydraulic pump
 HPU13M: DC Battery powered electric pump
 HPU14M: AC electric powered pump
 HPU15M: A foot pump

Consult DMC for complete brochure and information on all ASS259 hydraulic crimp tools and accessories.

Hydrac™ Hydraulic 7 & 12 Ton Crimping Tools for HD002, HD485, and HD442 Dies (AS5259)

HH80C Heavy Duty Hydraulic Crimper delivers the die force necessary to crimp large conductors, but still in a hand operated hydraulic crimper. The HH80C produces 7 tons with the two stage pump that minimizes the number of handle closures needed to complete the crimp. The utilization of the **HD002 (MS23002)**, **HD485 (MS90485)**, and **HD442 (MS25442)** dies extends the range of crimping capabilities to 2/0 AWG conductors in military/aerospace applications. (Verification available upon request. Contact/terminal samples required.) **Boeing ST 2354 Series Dies** are also available from DMC. The HH80C Hydraulic Crimper is fitted with comfortable handle grips for the best ergonomic advantage.

- 360° rotating head for ease in confined work areas.
- Advance closing to crimp position is achieved by rotating the handle.
- Automatic relief valve to prevent over-compression
- Release lever for relaxing crimp pressure and opening dies
- Crimp force: 7.0 tons (62.28kN)
- Length: 24 inches (610 mm)
- Weight 13.0 pounds (5.9kg)

HH80C HEAVY DUTY HYDRAULIC CRIMPER

TBHD1M Remote Hydraulic Crimp Head (**MS25441-1**) exerts 12 tons of crimp force and extends the range of crimping capabilities to **4/0 AWG** conductors in military/aerospace applications, and 750 MCM applications on commercial systems. The TBHD1M accepts the **HD002 (MS23002)**, **HD485 (MS90485)**, **HD442 (MS25442)** and **Boeing ST 2354 Die** combinations. In some cases the tool can be used as a hand-held crimper, but the tool weight (9.6 lbs) and force means mounting it in a stationary position with a bench mount (BM-2A) is the preferred mode of operation. The recommended hydraulic pumps are listed on page 117 or you can consult DMC for other hydraulic pump options.

Other Specifications that apply to the TBHD1M are the following:

- Crimp force: 12.0 tons (107kN)
- Length: 10.0 inches (254 mm)
- Width: 6.0 inches (152.4 mm)
- Weight: 9.6 pounds (6.9 kg)

HD002 DIES

HD442 DIES

HD485 DIES

**MS25441-1 QUALIFIED TO AS5259/1
(SHOWN WITHOUT SAFETY CAGE)**

The recommended hydraulic pumps are listed on page 117, or you can consult DMC for details. Contact DMC for a complete brochure on all AS5259 crimp tools and accessories.

See hydraulic pumps on page 113.

Manual Hydraulic Tool (7 ton force)	HH80C	N/A
Remote Crimp Head (12 ton force) (Requires Air to Hydraulic Pump)	TBHD1M *	MS25441-1 *
Hose Assembly (6 Ft. Length)	12-4040	MS25441-3*
In-Line Pressure Gauge	HPU11-PG	N/A

*Qualified to AS5259/1 (Tool Head) and AS5259/7 (Crimp Dies) Specification for Large Gage Crimp Tools

DMC1948 Tool Kit contains the TBHD1M Crimp Tool, HPU11M Pump 12-4040, Hose Assembly, and all the HD002 (MS23002) and HD485 (MS90485) dies for crimping insulated and uninsulated terminals and splices size 8 through 4/0. This tool kit is contained in a molded, high-density plastic case with foam inserts that have contoured tool cavities, laminated instruction sheets permanently attached on a ring binder, and contents charts identifying the location of each tool.

DMC1966 Tool Kit contains the TBHD1M Crimp Tool, HPU11M Pump 12-4040, Hose Assembly, and all the HD442 (MS25442) dies for crimping uninsulated aluminum terminals and splices size 8 through 4/0. This tool kit is contained in a molded, high-density plastic case with foam inserts that have contoured tool cavities, laminated instruction sheets permanently attached on a ring binder, and contents charts identifying the location of each tool.

HPU11-PG In-Line Hydraulic Pressure Gauge is recommended for cycle control monitoring, when using Remote Crimp Heads with HPU1M, HPU12M or HPU15M. It installs into either end of the hydraulic line to monitor the hydraulic pressure. The gauge will indicate to the operator when the required hydraulic pressure is achieved.

Hydraulic Pumps:

DMC offers several Hydraulic Pump options for use with crimp heads.

Pump options include:

HPU11M: Pneumatic powered hydraulic pump
 HPU12M: Hand powered hydraulic pump
 HPU13M: DC Battery powered electric pump
 HPU14M: AC electric powered pump
 HPU15M: A foot pump

NOTE:

HPU13M and HPU14M feature automatic cycle control and die retraction upon cycle completion.

More detailed product literature is available. Consult DMC.

Terminal and Splice Crimp Die Tooling Options 26 to 10 AWG

TOOLS AND DIES FOR CRIMPING TERMINALS AND SPLICES

DMC has several die configurations for crimping terminals and splices. AWG size is one determining factor, but each die configuration has a designated tool series. The hand tool is the basis of each tool series and suitable for the low volume of prototype or repair work. For higher volume production and

intermediate/depot maintenance, a tool series might include pneumatic tools, hydraulic tools, battery hydraulic tools, or electric hydraulic tools.

NOTE: If MIL Approval is required, QPL status should be verified. Consult DMC for current status.

WIRE STRIPPING FOR TERMINALS AND SPLICES

Wire strip length and configuration is important to the success of a termination. Guidelines for particular components being terminated should be followed carefully.

For additional information on tooling for terminating terminals and splices, ask DMC for the AS5259 tool brochure.

STANDARDIZATION

DMC has maintained a leadership role in military and commercial standards committees such as SAE, WHMA, EIA, UL/NEMA, and DoD organizations. The following tool selection charts represent the current leading standard components and tools. If questions or conflicts arise in the use of these charts, please notify DMC (407-855-6161, DMC@DMCTools.com). See disclaimer of liability on page 18.

Tensile Test Systems

For Wire Terminations & Similar Applications

THE DEPENDABLE ALPHATRON™ TENSILE TEST SYSTEM

Now available from DMC is a line of Electronic Tensile Test Systems which may be used in conjunction with SPC Programs or other Quality Control disciplines in both OEM and

maintenance applications. The electronic digital readout displays are a fast and reliable source of test data.

The rugged construction and the portable design of these test machines make any of them a superior choice for on-site or laboratory use in an infinite variety of applications. The operation of the equipment is simple yet versatile, and DMC will customize the gripping jaws or other components to make test sample installation and removal an easy task.

Models are available with output display readings in Pounds, Newtons, and/or Kilograms to conform with the requirements of the user's system. Units are available for either 115 or 230 volt power input.

It's only natural that the company which supplies the best wire termination tools and equipment would add the very best Digital Tensile Testers to further meet the demand for fewer sources and improved support through a wider range of user needs.

The MPT-250B Motorized Wire Crimp Pull Tester is ideal when a constant rate of pull is desired. It tests crimp

strength on terminations up to size 8 in Mil-Spec applications, and size 1/0 AWG in commercial and automotive applications.

The PT-150H Manual Wire Crimp Pull Tester is ideal for testing crimp strength up to size 10 for Mil-Spec applications, and size 4 AWG for commercial and automotive applications.

The HPT-200 hand-held pull tester blends the accuracy and rugged design of the Alphatron pull testers into a self-contained, portable, rechargeable battery powered unit. It is ideal for testing crimp strength up to size 10 AWG in Mil-Spec applications, and size 10 AWG in commercial and automotive applications.

MPT-250B

Motorized Wire Crimp Pull Tester

DMC DANIELS
MANUFACTURING
CORPORATION

Now available from DMC is a line of Electronic Tensile Test Systems which may be used in conjunction with SPC Programs or other Quality Control disciplines in both Production and Maintenance applications. The electronic digital readout displays are a fast and reliable source of test data.

The MPT-250B Motorized Wire Crimp Pull Tester has a range from five pounds force to two-hundred and fifty pounds (2-113 Kg, 22-1112 N).

You can expect the same precision and dependability that has established all ALPHATRON® testers as the first choice for wire harness builders and component suppliers throughout the industry. The 250 pound capacity of this tester will extend the range of testing capabilities to size 8 Mil-Spec applications*, and size 1/0 AWG in commercial and automotive applications** (Reference AS7928 and UL486 Respectively).

The portable design (25 pounds,

9.5"x10"x16") and the rugged construction (machined aluminum and steel) contribute to the versatility and reliability of the MPT-250B Pull Tester. A variety of options, including standard and custom grips for all types of wire terminations are available on this tester. The operation of the tester is simple and has automatic reset and auto-stop features incorporated into the design. The peak-hold digital display indicates the highest pull force that is measured by the accurate load cell/digital processor until the reset switch is pressed.

Consult DMC for more specific information, and application verification.

Product upgrade in progress. Consult DMC for status. NSN:6635-01-581-9996

SPECIFICATIONS FOR THE MPT-250B MOTORIZED WIRE CRIMP PULL TESTER

- Capacity Range 5-250 lbs. (2-113 kg, 22-1112 N)
- Pull Rate: 1 to 10"/min. Push-button Selectable in 1"/min. Increments.
- Pull Rate Accuracy ± 1/8"/min. @ 1-5"/min. Rate of Pull ± 1/4"/min. @ 6-10"/min. Rate of Pull
- Auto-Stop at Wire/Crimp Break Point
- Auto Return to Start Position
- 15 Position Slotted Lower Terminal Grip.
- Display Units in Pounds, Kilograms, or Newtons
- Lb/Kg/Newton Switching Built in

MPT-250B

The MPT-250B Motorized Wire Crimp Pull Tester is ideal when a constant rate of pull is desired. It tests crimp strength on terminations up to size 8 in Mil-Spec applications, and size 1/0 AWG in commercial and automotive applications.

MPT-250B Options:

- Ring Terminal Lower Grip
- Universal Self-Tightening Cam-Type Lower Grip
- Adjustable Set-point for Motor Stop at Pre-Set Force.

SLOTTED TERMINAL GRIP (Standard)

P/N 15-3087

15-3087 SLOTTED TERMINAL (LOWER) SLOT DIMENSION

1	.031"	6	.218"	11	.110"
2	.250"	7	.080"	12	.172"
3	.047"	8	.203"	13	.125"
4	.236"	9	.094"	14	.158"
5	.063"	10	.188"	15	.141"

*Size 8 MIL Spec wire pull test is typically 220 pounds force. Sample may not break at 250 pounds.

**May require special grips due to wire diameter.

PT-150H

Wire Crimp Pull Tester

The PT-150H Manual Wire Crimp Pull Tester is ideal for testing crimp strength up to size 10 for Mil-Spec applications*, and size 4 AWG for commercial and automotive applications**. The PT-150H may be used in conjunction with SPC Programs or other Quality Control disciplines in both OEM and maintenance applications. The electronic digital readout display is a fast and reliable source of test data.

The operation of the equipment is simple yet versatile, and DMC will customize the gripping jaws or other components to make test sample installation and removal an easy task.

* Size 10 MIL Spec wire pull test is typically 150 pounds force. Sample may not break at 150 pounds.

** May require special grips due to wire diameter.

- Weight 15.2 Lbs.
(Shipping Weight 21 Lbs.)
- Stand Dimensions:
H. 5", W. 8.5", D. 16"

CALIBRATION

- New units supplied with certificate of calibration traceable to NIST
- Factory calibration available

OPTIONAL FEATURES

- 230 VAC 50/60 Hz Power (P/N 15-7004)

PT-40XP Low Range Precision Pull Tester

PT-40XP

Now available from DMC, the portable PT-40XP Electronic Manual Tensile Test System is specially designed to test the lower range tensile values from 0.1 to 40 lbs. The PT-40XP may be used in conjunction

with SPC Programs or other Quality Control disciplines in both OEM and maintenance applications. The electronic digital readout display is a fast and reliable source of test data. This unit easily accommodates short wire leads (.75" minimum length test sample).

STANDARD FEATURES

- Capacity: 40 lb, 170 N/18.2 KGS
- Display units factory set for pounds, kilograms or newtons
- Resolution: 0.1 lb / 0.1 N
- Accuracy: $\pm 0.5\%$ of full scale
- Digital Display with Peak Hold
- LCD Display with 0.56" High Digits
- Two Self-Tightening Wedge-Grips and One Cam-Grip Assembly
- Precise Screw Pull Mechanism

POWER SPECS

- Built-in NiMH Battery, with Charger
- 14 Hours of Use on a Single Charge
- 100-240 VA Power Adapter with 3 interchangeable plug adapters included

PHYSICAL

- Weight 5.7 lbs.
- Dimensions: Height: 5.9", Width: 11.75", Depth 5.8"

CALIBRATION

- Verify Calibration Anytime
- Factory calibration available
- New units supplied with certificate of calibration traceable to NIST
- In order to maintain NIST traceability, Do Not Exceed 12 Months Between Factory Calibrations

HPT-200 Handheld Portable Pull Tester

HPT-200

The HPT-200 hand held pull tester combines the accuracy and rugged design of the Alphatron pull testers into a portable battery powered unit. We follow that up with our expert factory service and calibration.

The lightweight Alphatron HPT-200 is a self-contained tester that extends your testing capability to the shop floor. You no longer have

to wait for process samples to arrive in the QA Lab.

Durable construction and a convenient carry case ensure protection. The Low Stress tensioning mechanism makes the HPT-200 versatile and easy to use.

Standard Features:

P/N HPT-200-230

- Portable, lightweight and ergonomic design
- Built-in NiMH battery, with charger
- Up to 14 hour use on a single charge
- Low stress tensioning mechanism
- Protective carrying case
- Shoulder bag (optional)
- Built-in calibration test
- Accuracy: (0.5% of full scale)
- Resolution: (0.1 pounds)
- Display in newtons, or kilograms is available

Specifications:

- Capacity: 200 LBF, 90.7 kg, 889N
- Accuracy: $\pm .5\%$ of full scale
- Resolution: .1 lbf
- Display Type: Digital display w/ peak hold reading
- Display: LCD w/.56 in. high digits
- Electrical: 100-240VAC charging adapter
- 12VDC internal battery
- Operating Temperature: 50°F to 100°F (10° to 38°C)
- Height: 2 in. (5.08 cm) case
- Width: 9.5 in. (24.13 cm) case
- Depth: 6.25 in. (15.87 cm) case
- Weight: 2.5 lbs. (1.21 kg) case and hand unit

A 230 volt unit is available.

ST825 Swaging Tool for Cable (wire rope)

The DMC **ST825** Swaging Tool is used to swage terminals to flexible aircraft cable (usually stainless steel) and is built to meet government specifications. The complete tool consists of a cylinder and yoke assembly that is easily accessible for quick changing of dies, air hose assembly with a shut off valve and a single action foot control valve assembly with lubricator and air filter.

All swaging and cutting dies are of a hardened steel and are polished and heat treated to withstand high impact. Each die is marked to indicate the type and size terminal to be swaged, or cable to be cut.

This rugged tool, minus the dies, weighs less than 20 pounds. It operates on standard shop air pressure of 80 to 120 PSI and is designed for hand operation or it can be mounted to cushion base plate for bench top use.

This tool is also offered in the form of a tool kit (P/N **DMC99**). This includes additional items such as a base plate, gages, the complete range of cutting and swaging dies and instruction manual. All packaged in a durable metal carrying case.

Wiring System Service Kits

HERE IS WHERE DMC'S KNOWLEDGE AND EXPERIENCE PAY OFF!

Building a tool kit to service an entire wiring system involves extensive research to select the correct tooling and ensure all servicable connectors, terminals, splices and contacts are covered. Technicians who are responsible for the maintenance or production of entire systems cannot be expected to know all the answers, nor do they have the time to do the necessary research or locate tooling. DMC has this knowledge and does the technical research for them.

We apply our decades of connector industry experience and wealth of tooling information into developing the technical data for every Wiring System Kit we build.

We design and manufacture a tool kit package which includes:

- 1) All the necessary tooling (crimping tools, dies, heads, installing tools, removal tools, gages, wire strippers for circular and R.F. connectors and more).
- 2) Complete instructions on set up and use of each tool and accessory.
- 3) Valuable tool application data which eliminates guesswork and dangerous trial and error tool selection.

DMC has built Wiring System Service Kits for over 40 years and already has tool kits designed for most Military Aircraft & Ground Vehicles, Commercial Aircraft, Commuter and Executive Aircraft, Helicopters, as well as for individual Shipboard Systems, Weapons Systems and Avionics Systems. DMC kits have become the standard for wiring system maintenance.

We can assist you with the selection or custom design the right Wiring System Service Kit to meet your individual requirements.

After you have purchased a DMC Wiring System Service Kit, our trained personnel are available with the information and tools you need to keep your kit up-to-date.

Kit Applications

MILITARY STANDARD KITS

These kits are specified by many departments of the government, particularly the Navy and Air Force. They conform to MIL-M-83521, MIL-T-83507, and others. The national stock class code for most of the Military Standard Kits is usually 5120 or 5180.

AIRCRAFT OR SYSTEM KITS

We produce Wiring System Service Kits for a wide range of individual aircraft, families of aircraft, and mixed fleets. We can custom design or alter an existing kit to meet the user's requirements.

Some common aircraft covered are:

Airbus A300, A310, A320, A330, A340, A380
Bell 205, 206, 206L, 212, 412, 430
Boeing 707, 727, 737s, 747s, 757, 767, 777
Bombardier CRJ series, DASH 8s, CL-600 to 604
Cessna Citation I, II, III IV, V, VI, VII & X
Dassault FALCON 10/100, 20/200, 50/900, 50EX, 900EX & 2000/2000EX
Douglas DC8, DC9 and DC10
Embraer EMB-110, -120, -312, ERJ-135, -145, -170, -190 & Legacy
Eurocopter EC-135, EC-145, BO-105, BK-117
Fokker F50/F100
Gulfstream II, III, IV, V, G550
Hawker Beechcraft 800/800XP, 1900D, King Air 200, 200T, 350
Learjet 25, 31A, 35, 45, 55, & 60
Pilatus PC-12 & PC-7 Trainer
Sikorsky S-76, S-92
And many more...

Contact DMC, or visit our Web site, for a list of Aircraft and Systems covered by DMC Wiring System Service Kits.

GENERAL AVIATION KIT

The DMC1149 General Aviation Kit was developed for, and in conjunction with, organizations involved in the maintenance and outfitting of light commercial, business, and personal aircraft. It has since proven to be well suited for service of many types of other systems.

This basic kit covers the standard power contacts sizes 16, 20, and 22D in the following connector families.

MIL-DTL-24308	MIL-DTL-83723
MIL-DTL-26482	Deutsch DS Series
MIL-DTL-26500	ITT Cannon DPX and DC Series
MIL-PRF-38999	

Also covered are stamped formed contacts used in many general purpose connectors supplied by: AMP, Elco, Winchester, Collins Narco, Bendix, King, Sperry, etc. Plus necessary tooling to cover most common types of RF connectors (i.e. BNC, TNC) using RG/58 and RG/8 coaxial cable. Experience in the field has shown these to be the most common variety. (See technical application tables elsewhere in the catalog for specific descriptions and contact P/N for military designations.)

We cannot guarantee this kit will solve all your connector maintenance problems, but the necessary tooling and information will certainly be at hand for most requirements. (Our engineering department will confirm coverage of your specific requirements.)

The durable steel case provides strength and light weight. The tools are restrained in protective foam cavities.

PRODUCTION (WORK STATION) KITS

DMC work stations are custom designed to fit your production requirements. They can utilize hand tools or pneumatic models. Special holding clamps or work positioners can be included in the container or mounted permanently to the tooling enclosure. Our engineering department can give you details on the best work station for your application.

BACKSHELL ACCESSORY KITS

DMC produces a variety of innovative tools and adaptors which are used when fitting backshell or strain-relief hardware to electrical connectors. (Ask for our BETA Backshell Tooling Guide.) These tools are available in sets according to connector series or in complete system support tool kits. The kits can be individually designed to meet your maintenance or production demands.

Wiring System Service Kits

VALUABLE DATA PACKAGES

THE MAINTENANCE PROBLEM

Today's sophisticated aircraft, defense systems, and avionics electronics have become increasingly more complex. The technician who must maintain these systems cannot possibly be knowledgeable about all the various types of terminations and associated tooling needed to repair the vast number of interconnections which make up these systems.

Once the system becomes inoperative, the pressure to return the system to operation does not permit the luxury of researching the answers to these tooling complexities.

THE MAINTENANCE SOLUTION

Tool Selection Charts DMC does all the necessary research to relieve this pressure and eliminate the guesswork and haphazard, trial-and-error selection of tools by developing detailed Tool Selection Charts to cross reference all the connectors with vital repair tool data. These charts identify the connectors in alpha/numeric order by their military and/or commercial designations; identify the contacts by part number and color code where applicable; list applicable wire sizes; and identify the appropriate crimp tool and associated turret/positioner/die, installing tool and removal tool for wired and unwired contacts where applicable.

Instruction Sheets DMC provides detailed step-by-step directions on how to prepare a tool for use, crimp contacts, install and remove contacts, strip wire, and gauge tools and contacts. Instruction Sheets are also available to meet foreign language or unique special purpose tool requirements.

Contents Charts

These charts offer a visual representation of the storage compartments for all tools in the kit. The Contents Charts list the tools by part number, so the location of all tools ad reordering information is immediately available should a component require replacement.

Packaging. DMC then packages these Tool Selection Charts, Contents Charts, and Instruction Sheets with all the crimping tools, turrets, dies, wire strippers, installing tools, removal tools and other accessories necessary to support the system in durable cases tailored to the expected work environment so the tools are properly organized and protected.

With a DMC Wiring System Service Kit, the technician now has ready access to the technical data and tools for reliable, cost-effective Total Wiring System Support.

CALIBRATION, INSPECTION, AND OVERHAUL/REPAIR FOR TOOL KITS

DMC is available to overhaul and repair existing Wiring System Service Kits or periodic inspection & calibration. We'll repair cases when possible and replace or upgrade foam cavities as needed. We inspect & calibrate all tooling and determine if repairs need to be made. We also identify and replace missing tools, charts, & tool instructions. Contract DMC Customer Service for an estimate or more information.

KIT CONSTRUCTION

FOAM INSERTS

Foam inserts (standard for all DMC kits) provide each component with a designated storage space which is indicated on the Contents Charts. This assures the technician that no needed components are missing prior to departing to make the repair. The technician also knows, prior to leaving the on-site repair, that if a compartment is empty, then a component is missing and must be retrieved. This helps eliminate FOD (Foreign Object Damage) and accountability.

COLORED BASE LAYERS & LABELING (OPTIONAL)

Colored base layers are available to highlight tool cavities and aid with tool tracking. Cavity Labeling is also available to help identify tool cavities and make returning tools to the proper place simpler.

ENVIRONMENTAL PACKAGING

An analysis of the environmental conditions the kit must endure is an absolute necessity.

Our "Portable" kits are designed for on-site field maintenance. Maximum portability and component protection are the controlling design factors for portable kits. They are supplied in a durable case constructed of metal, fiberglass, or ultra-high impact copolymer. A captive restraint mechanism and heavy duty hardware are generally utilized to secure tools within their cavities.

REINFORCED CORNERS (OPTIONAL)

Fiberglass and high-impact copolymer cases are equipped with gaskets to protect against moisture intrusion. Fiberglass cases designated for ground vehicles even have steel reinforced corners.

Our "Roll Around Cabinet" kits are designed for FBO depot-level workshop maintenance. These kits are designed and packaged for security and convenient location of components. Depot-level cabinets are constructed of steel and have built in locks. They are equipped with roller drawer slides and wheels to allow them to roll around the work-shop or hanger, or can be loaded for easy deployment.

Regardless of packaging, all reference charts are laminated for protection against the elements.

CUSTOM SIZES

The tools and technical data can be packaged in various configurations: from a single metal tool box to a few portable cases to a multi-drawer, roll-around cabinet.

The same kit can be reorganized and reconfigured to serve different purposes. A single portable tool kit can be expanded into a larger cabinet by providing cavities for non-wiring related tools, or a single depot-level cabinet can be broken down into multiple portable cases.

Limited Warranty*

LIMITED WARRANTY*

Daniels Manufacturing Corporation warrants each new unit sold by it to be free from defects in material and workmanship under normal use and service. Its obligation under this warranty is limited to the free correction or, at its option, the refund of the purchase price of any such unit which proves defective within ninety (90) days after delivery to the first user, provided that the unit is returned to it with all transportation charges prepaid and which shall appear to its satisfaction, upon inspection by it, to have been defective

in material or workmanship. This warranty shall not cover any damage to such products, which in the opinion of Daniels Manufacturing Corporation, was caused by normal wear, misuse, improper operation or accident.

DANIELS MANUFACTURING CORPORATION IS NOT LIABLE FOR CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY NATURE OR KIND RESULTING FROM THE USE OF ANY OF ITS PRODUCTS. This warranty is in lieu of all other warranties express or implied. No warranty, express or implied, is made or authorized to be made or assumed with respect to products of Daniels Manufacturing Corporation, other than that herein set forth.

Ergonomics Challenge

DMC DANIELS
MANUFACTURING
CORPORATION®

ERGONOMICS CHALLENGE

Ergonomic guidelines set for less demanding and mechanically complicated hand tools (such as hammers, wrenches, wire cutters and pliers) cannot be applied to crimping tools which require thousands of pounds of force.

DMC's years of experience as a leader in the crimp tool industry, have confirmed that the most effective ergonomic improvements for workers can be achieved by substituting power assisted crimp tools for existing hand crimp tools wherever feasible. DMC's pneumatic, hydraulic, and battery operated power assisted crimp tools are already supporting OEM Production Line Operations where crimping is being done 24/7.

For hand crimp tools, DMC's ergonomic philosophy is to design the most mechanically efficient hand crimp tool linkage possible and to fit the hand crimp tools with comfortable grips and handle shapes, thereby producing ergonomic hand crimp tools with the same quality, precision and repeatability that have become synonymous with the DMC name.

The solution to the Ergonomics Challenge is to provide power assisted crimp tools for all crimping operations of sufficient volume where the user will see the value of ergonomic benefits.

DMC does not provide connectors, contacts or wiring components. Parts shown here are for reference only. See disclaimer of liability on page 18.
